

From the Briefing Room to Your Living Room: How the President Influences the Media's Agenda*

David R. Miller[†] Benjamin S. Noble[‡] Erin L. Rossiter[§]

June 11, 2026

Abstract

Presidents want to shape public opinion, yet few Americans directly consume presidential appeals. Reaching the public, then, is conditional on the president's ability to shape media coverage—an often overlooked, but key intermediary in the process of going public. We assess the White House's ability to influence the press's agenda during and downstream of over 7,000 Daily Briefings from 1993–2024. We find that the White House exercises greater agenda control during a briefing when the White House delivers a longer opening statement or invites an expert guest. However, influence declines during divided government. Further, we show that control of the briefing agenda matters downstream for the news Americans consume. The more the White House controls the briefing agenda, the more subsequent nightly news coverage mirrors the White House's language. Our results provide microfoundations of presidential media influence and have implications for the president's potential to influence the public.

*For helpful comments, we thank Matthew Eshbaugh-Soha, Aaron Kaufman, Kenneth Lowande, Brendan Nyhan, Julia Park, Margaret E. Roberts, and Brandon Rottinghaus; participants at the 2025 Bowling Green State University Constitutional Democracy Symposium, 2026 Presidents and Executive Politics Conference hosted at the Hoover Institution, and 2026 Midwest Political Science Association annual meeting; and the anonymous reviewer from the rapidPeer service at Harvard's Institute for Quantitative Social Science. We also thank Amy Brooke Grauley and Evyn Anderson for excellent research assistance.

In May 2023, with government divided, President Biden and Speaker McCarthy (R-CA) were locked in a game of chicken over the debt ceiling—a game the president was losing. As the X-date neared, the White House faced increasing criticism from both the Republican House majority and the press. In the White House Daily Briefing on May 24th, Press Secretary Jean-Pierre could not escape combative questions about the president’s negotiating strategy and potential default. Toward the end of the briefing, one reporter plainly asked: “what do you say to congressional Democrats who feel cut out of the process and feel like Republicans have taken control of the narrative?” (The White House 2023). From there, things got worse. That night, NBC Nightly News played a clip of the briefing in which Jean-Pierre called the crisis “manufactured,” but they gave the Speaker the last word. The segment ended with McCarthy saying, “we have to spend less than we spent last year. It is not my fault that the Democrats cannot give up on their spending” (NBC Nightly News 2023). Clearly, the White House lost the messaging war. But other times, they succeed. In 2021, during a period of unified government, the president raised the debt ceiling over Republican objections with little push-back from the press. Although many agree that “no other single actor in the political system has quite the capability of the president to set agendas” (Kingdon 1995, 23), as these examples illustrate, agenda-setting power is variable. Here, we ask: when is the White House able to influence the media’s agenda? And which factors promote or limit its ability to do so?

Presidents rely on public support to achieve their goals and often “go public” in hopes of mobilizing that support (Kernell 1997). Yet, scholars debate how successful these efforts are. For instance, political scientists argue that presidents’ speeches rarely change public opinion (Edwards 2003; see also Christenson, Kreps and Kriner 2021; Franco, Grimmer and Lim n.d.; Howell, Porter and Wood 2020; Eshbaugh-Soha, Juenke and Silva 2023). However, much of this work assumes the public hears what the president says. The reality is different. Only the most engaged, unpersuadable partisans consume traditional presidential appeals directly (Kernell and Rice 2011). To access the persuadable audi-

ence, presidents strive for ubiquity, increasingly appearing in political and non-political spaces (Scacco and Coe 2021). Even so, much of what this public learns about the presidency is mediated by the news media (Cohen 2008, 2010; Eshbaugh-Soha and Peake 2011), where political communications scholars argue that presidential messages *can* influence the public *when the media relays them* (e.g., Behr and Iyengar 1985; Bennett, Lawrence and Livingston 2007; Entman 2003; Fahmy et al. 2011). However, the media does not simply repeat the president's words. The press often questions, contextualizes, distorts, or even ignores the White House's narrative, (re)shaping the message before it reaches Americans (Baum and Kernell 1999; Baum and Potter 2008; Clayman et al. 2007; Entman 2003; Eshbaugh-Soha and Peake 2011; Groeling 2010). Although many studies of "going public" ignore the press, studying its mediating role is key to understanding whether the news that reaches the public reflects the president's intended message.

To understand when the media is more likely to relay the president's preferred messaging, we focus on a routine, institutionalized practice valued by both the White House and press: the White House Daily Briefing. The briefing serves as an important information subsidy through which the White House seeks to shape downstream news coverage of the president (Cohen 2010; Gandy 1982; Kioussis et al. 2016; Kumar 2007). Yet control of the briefing agenda is contested. While the White House seeks to promote its priorities, reporters are motivated to uncover new information, demonstrate independence, and introduce alternative perspectives. Questioning from the press corps may knock the Press Secretary off-message (Baum and Potter 2008; Groeling 2010; Kumar 2007; Zaller N.d.). Because the briefing's agenda emerges through this dynamic interaction, we can observe whether and when the White House is able to keep the discussion focused on its preferred issues and frames in real time.

We argue that the White House's ability to influence what is discussed during the Daily Briefing—what we call *briefing agenda control*—is a function of the White House's strategic choices and the political environment. We highlight two first-mover strategies

the White House can deploy as host: offering longer opening statements or inviting “special guest” speakers (like national security officials). These tactics keep journalistic attention on White House-preferred topics and frames by providing novel, authoritative and credible information (Clayman 2004; Eshbaugh-Soha 2013; Gandy 1982; Kioussis et al. 2006, 2016). Then, we examine a political factor that can hamper White House agenda control: divided government. Journalists typically index coverage to the range of influential actors involved in a story and, as the head of the Executive Branch, the president is almost always one of these voices (Bennett 1990; Zaller and Chiu 1996). However, during divided government, the opposition party gains new policymaking authority, and thus, more influence in journalistic indexing. Their perspectives take on new weight in reporters’ questioning and coverage (Bennett, Lawrence and Livingston 2007; Groeling 2010; Iyengar 2023; Zaller and Chiu 1996). Finally, we assess whether the Daily Briefing is an effective information subsidy. We ask: when the White House exercises more briefing agenda control, does downstream coverage privilege the president’s perspective?

To test these hypotheses, we collect transcripts from all White House press briefings held between January 27, 1993 and April 4, 2024. We then analyze these briefings using the Speaker Identity for Topic Segmentation (SITS) topic model (Nguyen, Boyd-Graber and Resnik 2012; Nguyen et al. 2014; Rossiter 2022), which measures participants’ agenda control in turn-based, conversational contexts, like the Daily Briefing. This model identifies what is being discussed in terms of issues and framings, and when an actor shifts the discussion. We measure briefing agenda control as the proportion of each briefing that stays on White House-initiated issues and framings. As expected, the White House has more briefing agenda control when it offers a longer opening statement and when it invites at least one special guest. However, this power weakens during divided government. Subsequently, we show that this influence matters: when the White House more effectively controls the briefing agenda, that night’s ABC, CBS, and NBC news broadcasts use language that better mirrors the White House’s messaging.

Our findings contribute to the literature on presidential agenda setting (Cohen 1995; Canes-Wrone 2006) and influence over the media (Edwards and Wood 1999; Eshbaugh-Soha and Peake 2011). Where many past studies focus on the direct link between presidential rhetoric and public reaction, we model an often overlooked but crucial intermediate step: transmission of that message through the mass media. We suggest one reason presidents struggle to lead the public is that they lose control of the message as it is interpreted and transmitted by the media. Although the Daily Briefing is not Americans' primary news source, what happens there matters for how presidents go public and their potential to shape American opinion.

Presidents and the News Agenda

Presidents are strategic actors whose electoral, policy, and legacy goals are achieved, in part, by passing a substantive agenda (Light 1999).¹ Doing so requires coalition building (Edwards 2000; Miller 2023), and in these efforts presidents have long pursued a strategy of "going public" to mobilize public sentiment (Kernell 1997). Presidents have more direct access to this audience than ever, and they increasingly attempt to circumvent the press (Scacco and Coe 2021). Yet the public they face is increasingly inattentive, fragmented, and skeptical (Baum and Kernell 1999; Cohen 2008). Much of what the public learns about the president comes via the media (Cook 1998; Stuckey 2000), where the message may be clipped, editorialized, or ignored. Thus, presidential messaging success depends not only on what the president says, but whether and how journalists transmit his messages.

Presidents are not typically wanting for media attention. Journalists index elite viewpoints to construct stories (Bennett 1990) and in doing so place more emphasis on elites with power to affect policy (Zaller and Chiu 1996). Given his role as chief executive and national leader, the president is a fixture of journalistic attention in this process (Bennett,

¹Akin to the concept of legislative enterprise (Salisbury and Shepsle 1981), we consider all White House communication efforts to be part of an "executive enterprise" where staffers are extensions of the president.

Lawrence and Livingston 2007; Entman 2003; Groeling 2010; Iyengar 2023). Professional norms and market forces also drive journalists to seek official, authoritative sources. As the head of the executive branch, the president has access to, and control of, critical information, making him a key source (Bennett, Lawrence and Livingston 2007; Groeling 2010; Iyengar 2023; Parks 2020). Additionally, Americans are interested in presidential news; media market incentives motivate journalists to meet this demand through constant coverage of the president (Eshbaugh-Soha and Peake 2011; Gans 1979). Given this confluence of forces, journalists have been socialized to view presidents as “definitionally newsworthy” and have normalized “the newsworthiness of his everyday activities and reif[ied] the implicit power of his most subtle gestures” (Parks 2020, 519).

Even if presidents are routinely covered, that coverage may not uncritically convey what a president did or said. Other journalistic incentives and routines can lead outlets to critically interpret or ignore presidential messaging. First, journalists’ adherence to norms of autonomy, objectivity, and playing a “watchdog” role incentivizes push-back that can undercut the White House’s narrative (Clayman et al. 2007; Gans 1979; Iyengar 2023). Second, the same indexing process that privileges the president can elevate other detracting voices. When co-partisan dissenters or opposition leaders counter the president’s narrative, reporters often elevate these viewpoints and dilute the president’s perspective (Bennett, Lawrence and Livingston 2007; Entman 2003; Groeling 2010; Zaller and Chiu 1996). Relatedly, media outlets expect a broader audience for stories that feature conflict and partisan balance; journalists are incentivized to feature contrasting viewpoints—even if that means journalists themselves serve as foils (Entman 2003; Groeling 2010; Harcup and O’Neill 2017). Finally, presidents are not central to every story. They may see their coverage wane when other newsworthy events steal the spotlight (Edwards and Wood 1999). Salient, ongoing stories can further constrain the White House. When a story has already saturated the news agenda, the White House may struggle to redirect media attention to its preferred framing (Behr and Iyengar 1985; Boydston 2013; Canes-Wrone and

de Marchi 2002).

Given these challenges, presidents can use public relations resources in an effort to influence their coverage. In particular, they try to influence the agenda-building process, where journalists decide which news objects to focus on and which attributes of those objects to emphasize—first- and second-level agenda building, respectively (Fahmy et al. 2011; Kioussis et al. 2006, 2016; Lang and Lang 1981). Given operational and economic constraints, journalists cannot cover all perspectives on all stories (Boydston 2013). Motivated political elites, like the president, can influence news organizations by providing information subsidies that direct attention to newsworthy objects and frames they hope journalists will adopt (Gandy 1982). These subsidies are mutually beneficial. For journalists, elite-provisioned information subsidies, like press releases and briefings, make it easier for them to gather novel, authoritative information. Elites use these subsidies to elevate their perspectives and narratives among journalistic considerations (Cohen 2010; Grimmer 2013; Fahmy et al. 2011; Kioussis et al. 2016). In order to understand how effectively the president can reach the public, we must account for his ability to influence the media's agenda through these information subsidies.

The Fight to Control the Daily Briefing

We examine the White House's ability to use information subsidies to influence the agenda building process by studying the White House Daily Briefing. The modern Daily Briefing is typically led by the White House Press Secretary (or her designee) on weekday afternoons. Here, the White House contextualizes the president's words and actions from earlier in the day. Journalists ask questions to uncover new information and generate clips to use on their television, Internet, and social media platforms (Kumar 2007). The latter feature is an increasingly important consideration as organizations emphasize audiovisual content, even in print stories, to increase engagement in a digital informa-

tion ecosystem (Harcup and O'Neill 2017; Trielli 2025). Among presidential information subsidies, the Daily Briefing offers a unique window into the White House's ability to influence the press. First, this setting permits us to observe a dynamic form of agenda building given the question-and-answer format. Second, as part of the institutional presidency, each Press Secretary inherits existing structures and norms from previous administrations and press corps, facilitating over-time comparisons (Kumar 2007, 223). Third, the Daily Briefing is routinized and near-daily, meaning we can observe agenda building in a context where presidents exercise less discretion over *whether* to speak. Its frequency and stability facilitate comparisons across time.

For the White House, the briefing represents an opportunity to influence the agenda as it is built. Ronald Reagan and George H.W. Bush Press Secretary Marlin Fitzwater explained, “[n]ormally, there was one story each day that dominated the news and my briefing. My goal was to find some way to ‘advance’ that story... all with the aim of influencing the story so it reflected the president’s viewpoint” (Fitzwater 1995, 95; see also Cook 1998, 138). However, the Briefing is unlike other presidential information subsidies, such as a speech, where the White House fully controls the message. For the press, the briefing is a chance to ask tough questions, surface novel information, and ask for impromptu reactions to events (Kumar 2007). Former Bill Clinton Press Secretary Jake Siewert observes that reporters, as independent watchdogs, “want some footage of them whacking around a White House official,” which comes at the expense of the agenda the White House seeks to promote (Miller Center 2018). Although the Press Secretary’s goal is “to, as much as possible, stay on the messages we want to” (former George W. Bush Press Secretary Dan Bartlett, quoted in Kumar 2007, 94), there is a risk she loses control. While the Press Secretary’s first impulse may be “getting reporters off [an unfavorable] story” (former Reagan Deputy Press Secretary Peter Roussel, National Archives 1999a), they know they cannot strictly stick to talking points and dodge all unfriendly press questions. As Bill Clinton Press Secretary Mike McCurry explains, refusing to engage with “off-message” questions

can create the perception that the Press Secretary is “stonewalling, not being forthcoming,” eroding trust and collegiality between the press corps and the White House (quoted in Kumar 2007, 49). Given this cat and mouse game, we examine the White House’s ability to control the briefing’s agenda by using first-mover strategies as well as how external political forces can inhibit its briefing agenda control.

Hypotheses

We define the White House’s briefing agenda control as the share of the briefing that focuses on issues and attributes of those issues introduced by the White House, as opposed to those introduced by the press corps (first- and second-level agenda building, respectively). This definition reflects the White House’s desire to both emphasize the issues central to the president’s priorities and to garner coverage of those issues that reflect the frames and tone the White House advances (Cohen 2010; Eshbaugh-Soha and Peake 2011; Fahmy et al. 2011; Kioussis et al. 2006, 2016; Kumar 2007).

First Mover Strategies

As host, the press secretary can speak first, allowing her to employ first mover strategies that may bolster agenda control (Clayman 2004). Opening statements themselves serve as subsidies: they make the president’s priorities and views for that day clear to reporters (Eshbaugh-Soha 2013). These statements come from an authoritative official speaking on behalf of the president and can provide novel information or perspectives to attract reporters’ attention. The press secretary may anticipate reporters’ questions based on the morning’s news, the informal pre-briefing gaggle, and her own sense of reporters’ priorities. She can use the opening statement to address those topics on the White House’s preferred terms before they are raised (Kumar 2007, 229). We argue that lengthier opening statements reflect stronger attempts to exert this control, given the time and effort needed to craft them as well as the additional information they provide. The open-

ing statement also creates a primacy effect: what the Press Secretary talks about takes on added importance in reporters' minds and may guide their questions towards the White House's agenda (Miller and Campbell 1959). Accounts from former White House staffers and correspondents support this argument. For example, Roman Popadiuk, who served Presidents Reagan and H.W. Bush, said that an opening statement "calms the press down. They have to sit down and listen, because you might say something important... you're in control now" (National Archives 1999b). Dom Bonafede, recounting his work as a correspondent for the *National Journal* during the Gerald Ford administration, echoed similar sentiments: "every day when [Press Secretary Ron] Nessen gets out there he determines, with his opening statement, what the news is going to be for that day" (quoted in Grossman and Kumar 1981, 33).

Opening Statement Hypothesis: The White House will have more briefing agenda control in the Daily Briefing when offering a longer, relative to a shorter, opening statement.

Second, the Press Secretary may invite other administration officials, like cabinet secretaries or national security officials, to make statements and answer questions. These "special guests" are a specialized information subsidy—they provide a signal of presidential priorities and encourage the press to pose questions in that guest's portfolio (Cook 1998; Gans 1979). Additionally, the press corps has less access to these officials, so their presence appeals to journalistic incentives for novelty and authority (Groeling 2010; Harcup and O'Neill 2017). Mike McCurry argues that special guests were an effective way to communicate the president's message because "it was more reliable and authentic" to have policy experts communicate the details of the White House's actions (Kumar 2007, 49).

Special Guest Hypothesis: The White House will have more briefing agenda control in the Daily Briefing when inviting special guests, relative to when they do not.

Political Environment

While these strategies may enhance the Press Secretary's briefing agenda control, forces in the political environment outside the briefing room may constrain the White House. In particular, because journalists index coverage to the range of important elite voices in a story (Bennett 1990), the balance of partisan power between the White House and Congress can alter the relative influence the president enjoys in the press's indexing process. During periods of unified government, the opposition party has limited policymaking influence and thus its perspectives are not weighted heavily when reporters index (Zaller and Chiu 1996). Given high in-party loyalty to the president in recent decades (Alexander and Jacobs 2023), the White House's narrative holds its place of primacy in the indexing process. However, when the opposition party controls at least one chamber of Congress, it gains power to affect policy outcomes and conduct oversight of the executive branch (Bond and Fleisher 1990; Kriner and Schickler 2016), prompting journalists to elevate its importance in the indexing process (Bennett, Lawrence and Livingston 2007; Eshbaugh-Soha 2013; Groeling 2010; Groeling and Baum 2009; Zaller and Chiu 1996). Consequently, the press becomes less deferential to the White House's narrative and raises the opposition party's combative comments and actions as it tries to balance and reconcile contrasting elite viewpoints.

Divided Government Hypothesis: The White House will have more agenda control in the Daily Briefing during unified government relative to divided government.

Downstream Influence

Finally, these fights to control the Daily Briefing's agenda shape the news Americans consume. For the press corps, and the news organizations that employ them, time and resource constraints often mean they rely on the Daily Briefing as a subsidy in the agenda building process. If they draw on the briefing for reporting, the content from the briefing

will anchor their coverage. If the White House can keep the focus on its priorities and perspectives during the briefing, that will likely be reflected in journalists' subsequent reports (Eshbaugh-Soha 2013; Fahmy et al. 2011; Gandy 1982; Kioussis et al. 2006, 2016). Indeed, the White House measures the success of the briefing by assessing its influence on downstream news coverage; for instance, Mike McCurry recalled that “when you turn on your network news at night or begin to look at the Internet and see what the next day’s newspapers will look like...” he could begin to assess whether the Daily Briefing had been effective (quoted in Kumar 2007, 57). Thus, when the White House is better able to control the agenda in the briefing room, subsequent media coverage should more strongly reflect the White House’s message.

Subsequent Coverage Hypothesis: When the White House has more agenda control in the Daily Briefing, downstream broadcast coverage will echo more language from the White House’s agenda-controlled briefing segments than that of the press corps.

Data and Measurement

To test our hypotheses, we need a measure of the White House’s briefing agenda control. In this section, we explain how we operationalize our construct of briefing agenda control using a corpus of press briefing transcripts and the Speaker Identity for Topic Segmentation (SITS) topic model.

Press Briefing Transcript Data

We begin by collecting all White House press briefing transcripts available from The American Presidency Project as of April 9, 2024 (Woolley and Peters N.d.).² This corpus

²Most transcripts are formal Daily Briefings (5,081, or 71.9%). The corpus also includes events such as press gaggles as background briefings. As all these events constitute on-the-record dialogues between the White House and the press, and these other events often substitute for Daily Briefings, we include them in our corpus. See Appendix A for details.

contains 7,071 transcripts from January 27, 1993 to April 4, 2024, excluding all lame duck periods. Panel A of Figure 1 shows the number of transcripts in our dataset per presidential term. With the exception of Donald Trump’s first term in office, each presidential term includes over 750 briefings, held on most weekdays.³

Next, we transformed the transcripts into a dataset at the “speaking turn” level. We define a speaking turn as the sequence of uninterrupted speech by a given speaker, ending when another speaker begins speaking. We classify all White House-affiliated speakers (i.e., Press Secretary, administration officials) as one speaking entity—the White House—and all other speakers as a second entity—the Press. The resulting dataset has 661,218 speaking turns, with an average of 93.5 speaking turns per briefing.

We use these data to measure the two White House first-mover strategies highlighted in our hypotheses—whether the White House offered a longer opening statement and whether at least one special guest was present.⁴ Figure 1, Panels B and C, respectively, visualize these features by presidential term. Over time, presidents employ longer opening statements, with the median opening statement under Trump and Biden being over twice as long as for Clinton, Bush, and Obama. Guests peaked under Biden, who brought at least one guest to over 60% of briefings. All other presidents brought guests to less than half.

Topic Model Estimation

To quantify the White House’s briefing agenda control, we apply the parametric Speaker Identity for Topic Segmentation (SITS) topic model to our speaking-turn dataset (Nguyen, Boyd-Graber and Resnik 2012; Nguyen et al. 2014; Rossiter 2022).⁵ This model is similar

³Starting in the second year of Donald Trump’s first term, his administration broke with precedent and offered briefings irregularly. In Table E3, we show that briefing frequency does not systematically alter our main effects with respect to downstream coverage, nor is frequency itself a robust predictor of downstream coverage.

⁴We define the opening statement as any White House speech before the first substantive press speaking turn. See Appendix C for details.

⁵See Appendix C for details on the model estimation. We estimated the model with $K = 50$ topics.

Figure 1: Key Features of Press Briefings by Presidential Term

Note: Figure visualizes features of the transcripts in our dataset ($n=7,071$). Panel A shows the number of press briefings per presidential term. Panel B shows median number of words used in the White House's opening statement per presidential term. Panel C shows the percent of press briefings with at least one special guest per presidential term.

to familiar topic models in political science, such as Latent Dirichlet Allocation (LDA) and the Structural Topic Model (STM) (Roberts 2014).⁶ However, unlike LDA and STM, SITS was constructed specifically for interactive, multi-speaker settings—such as the Daily Briefing, wherein White House officials and reporters engage in dialogue (Nguyen, Boyd-Graber and Resnik 2012; Nguyen et al. 2014).

In the context of SITS, each interaction—here, each Daily Briefing—is similar to LDA and STM's "documents." Also like LDA and STM, SITS is a mixed-membership topic model, where each document is assumed to contain a mixture of K topics. The model estimates a distribution over the K topics for each briefing and each speaking turn. Therefore, each speaking turn is not characterized by a single political issue (e.g., immigration) or a single topic estimated by the model.⁷ Instead, each turn is characterized by a mixture

⁶SITS has been validated by human coders across several types of political discourse in prior work, such as presidential debates and small group discussions (Nguyen, Boyd-Graber and Resnik 2012; Nguyen et al. 2014; Rossiter 2022). In Appendix C.2, we present findings from a validation exercise for the SITS estimates used in the models presented below, finding substantial agreement between a human coder and the model output.

⁷Recall that a "topic" in a topic model is a probability distribution over the words in the corpus vocabulary, such that an estimated topic does not necessarily correspond to a specific political issue.

of the K topics. This representation captures important nuance in political discourse, as distributions over the K topics may capture distinctions across issues (e.g., immigration vs. education policy), within issues (e.g., immigration enforcement vs. immigration reform), and differences in framing (e.g., immigration as a border security issue vs. as a humanitarian issue). This conceptualization of speech as a mixture of estimated topics is key for learning about the White House's influence through both first- and second-level agenda building (Fahmy et al. 2011; Kioussis et al. 2006, 2016).

Crucial for assessing agenda control during the briefing, SITS uniquely estimates where shifts in this latent topic structure occur. Specifically, for each speaking turn in a briefing, SITS estimates the probability that a shift has occurred in what is being discussed. A “topic shift” occurs when the turn’s distribution over topics, which can capture nuances in issues and framings, is sufficiently different from what is currently being discussed. All speaking turns between one topic-shifting turn and the next belong to a given topical “segment” of the press briefing. In other words, all turns within a segment share a similar distribution over the K topics. The longer the segment, the more the briefing sustained attention on the same issue or framing. Our ultimate goal is to operationalize how much the White House is able to control what is discussed in the briefing room. To do so, we use the identity of the speaker (the White House or the press) that initiated each shift in the discussion and how long (how many speaking turns) the briefing sustained attention on that discussion.

To summarize: each press briefing transcript is akin to a “document;” we identify at the speaking-turn level where shifts in the discussion occur; the sequence of turns between shifts constitute a cohesive topical segment; and we use who introduced each segment and how long that segment persists in order to understand who is controlling the agenda at that moment.

Figures 2 and 3 provide examples of these parameters from a press briefing during the Obama administration on March 11, 2013. The figures show excerpted speaking-turn text

Figure 2: Examples of Rapid Press Briefing Topic Shifts

3. White House (Shift): ...I have no announcements to make. You obviously know much of what's on the President's schedule this week, including his **visits to Capitol Hill**... to discuss a range of priorities including, of course, conversations he's been having on budget-related issues, the need to **reduce our deficit** in a balanced way, but also immigration reform and the progress that's being made on that subject in a **bipartisan way, efforts to move forward** on actions to reduce gun violence -- **also efforts that involve both Democrats and Republicans**...increasing our energy independence, the need to do something about the pace of nominations being confirmed and considered in the Senate -- **judicial nominations**, in particular -- as well as the need for Congress to take action on cybersecurity...

4. Press (Shift): ...So since we are on week two of the charm blitz --...the President is going to the Hill, but he's also speaking to Organizing for Action, which is the group that **grew out of his campaign reelection**...last week OFA sent out an email...calling Republicans obstructionists, **blaming them for the sequester, saying if only they had voted for closing tax loopholes** the public wouldn't be in this jam. So is there a mixed message there from the President...appealing to and speaking to Republicans ... and then going to OFA, **potentially...a more partisan address?**

5. White House (Shift): Organizing for Action, as you know, Jim, was established to promote the President's public policy agenda. It is certainly the President's position that **sequester** has been implemented because Republicans made a choice. Rather than go along with a balanced approach to deficit reduction, rather than go along with either a buy-down or the deal that has been on the table...And it is another reason why we should **engage with and move forward...with at least the potential for bipartisan**, balanced deficit reduction that deals with the sequester and the larger goal of more than \$4 trillion in deficit reduction over a decade...the President has put forward solutions that **represent compromise...getting our fiscal house in order** in a way that's balanced so that the burden is not borne solely by seniors and middle-class families.

6. Press (Shift): Washington is a place of optics, too, and is it **diplomatic** to be thinking of -- be speaking to a **partisan** group on the same day that he's speaking to --

7. White House (Shift): First of all, I think you're misrepresenting the group...it's focused on policy issues. And the President's policy agenda...consists of item after item that have had **bipartisan support** in the past, that should have bipartisan support in the future. I mean, there's nothing partisan about **deficit reduction**... the President is pushing for a balanced package that would achieve the goal of over **\$4 trillion in deficit reduction** over a decade. And that includes a proposal that produces significant savings from entitlement reform as well as savings from **tax reform**... In the wake of Newtown, I would argue that there's nothing partisan about **common-sense solutions to reduce gun violence** in America. The victims of gun violence aren't Democrats or Republicans, especially when they're children. And there ought to be -- and there is -- **a path forward** to reduce gun violence in America...

Figure 3: Examples of Winning Attention with Press Briefing Topic Shifts

Press Shift Example

23. White House: ...there are organizations all...around the country that support policy agendas and policy areas. That's what this organization does. And I would **refer you to them for more details** on their efforts. They are not...engaged in **political campaigning -- winning elections or helping candidates win elections**. They're focused on the policy proposals...Mary.

24. Press (Shift): Jay, over the weekend, **Afghan President** Hamid Karzai said the U.S. is encouraging violence in conjunction with the **Taliban** to prolong the U.S. presence in **Afghanistan**. He said the Taliban were killing Afghan **civilians** "in service to America." What was the President's reaction to hearing this?

25. White House: I think Secretary Hagel and General Dunford spoke to this yesterday and made clear that any suggestion the United States is colluding with the **Taliban** is categorically false...The United States has spent enormous blood and treasure for the past 12 years **supporting the Afghan people** and ensuring -- in the effort to ensure stability and security in that country. The last thing we would do is support any kind of violence, particularly involving **innocent civilians**.

26. Press: Do **Karzai's comments** and this kind of mounting **tension** harm or impact U.S. plans to withdraw?

27. White House: The President has a policy that has been embraced by NATO, by our allies in the coalition, and we are pursuing that policy. That includes we've drawn down the **surge forces** and we're winding down our **troop presence in Afghanistan** as we build up **Afghan security forces** and turn over security lead to **Afghan security forces**. And that progress continues...

White House Shift Example

53. White House: We are engaging with Senate Democrats, with House Democrats, with Senate Republicans and House Republicans, as you know, on budget issues as well as on the broader agenda that we've been talking about --

54. Press: But now that they're **drawing up their budget** --

55. White House (Shift): I'm sure there are conversations going on, on that process....The broader effort underway here is to try to, through the budget process, achieve a compromise that allows for both **entitlement reform and tax reform** that produce the savings necessary to achieve that \$4 trillion-plus target over **10 years of deficit reduction**. ...And that is the President's goal: deficit reduction large enough to put our **economy on a fiscally sustainable path** so that the ratio of debt to GDP is below 3 percent for a period of time that would allow, concurrently, through investments and other policy decisions, allow the economy to grow...

56. Press: Is there going to be a goal -- obviously Paul Ryan has got a 10-year target. Is the President going to have a **target**, whether it's 10 years, 15, 20, whatever --

57. White House: The President will have a **target for deficit reduction** over 10 years, as he has consistently in his budget --

from the briefing (see Appendix C for full text). For each turn, the italicized text indicates the index of the speaking turn in the transcript, who is speaking, and whether a shift in the discussion occurred. Next to each speaking turn’s text, we plot the turn’s estimated topic distribution. Recall we estimated the SITS model with $K = 50$ topics. We visualize the densities for only the 15 topics that occurred with a proportion of .10 or more in our examples across Figures 2 and 3 (Appendix C presents the top words from all 50 topics we used to create these topic labels). In these barplots, we also label the turns that SITS identified as shifting the course of discussion with “Shift.” Finally, we aid the reader by using bold text for words and phrases in the excerpted text that align with the topic model’s output. Broadly, Figure 2 provides an example of a fight for the agenda: rapid shifts in discussion in which the White House and the press each raise issues aligned with their respective agendas but fail to sustain attention on those issues. On the other hand, Figure 3 provides examples from this briefing where the press and the White House successfully control the agenda, with the other speaker sustaining the line of discussion.

To demonstrate how the White House and the press compete for control over the agenda in real time, Figure 2 begins on the third speaking turn in the briefing, after the White House and press exchange pleasantries. In turn 3, the White House opens the briefing by focusing on President Obama’s bipartisan efforts—referencing meetings with congressional Democrats and Republicans (topic 40), particularly on deficit-reduction efforts (topic 49) as well as several bipartisan policy priorities (topic 30), including calling special attention to the pace of judicial nominations (topic 43). In turn 4, the press corps pushes back, accusing the president of partisan behavior in an upcoming speaking engagement with Organizing for Action (OFA), an organization that emerged from Obama’s 2012 re-election campaign intended to promote his agenda. The model identifies this turn as shifting topic, and the barplots give insight into why—the press corps emphasizes the partisan nature of the president’s recent actions (topic 28). Then in turn 5, the White House subtly tries to pivot back to the bipartisanship framing (topic 30) of the

deficit issues (topic 49). While turns 4 and 5 discuss sequestration (topic 49), they emphasize different framings in doing so, and the model captures these subtleties. In turn 6, the press corps tries to again establish discussion on the partisan nature of the president's activities, and the model identifies this as a shift in discussion. Yet again in turn 7, the White House discusses the deficit issues (topic 49), but from the angle of bipartisan legislation (topic 30), and this time also works in discussion of gun control (topic 29). The briefing has yet to sustain attention on a shifted-to discussion point as the speakers push their desired issues and framings. This example also illustrates that estimated "topic shifts" from the SITS model are not shifts in singular political issues or topics from the model (e.g., from judicial nominations to nuclear weapon threats). Rather, any given speaking turn is a mixture of topics from the topic model, and these mixtures constitute the state of the discussion. Therefore, the model captures shifts in both the issues discussed and the ways those issues are framed, allowing us to detect both White House's agenda control through first- and second-level agenda building (Fahmy et al. 2011; Kiousis et al. 2006, 2016).

Figure 3 provides examples where the press and the White House each control the agenda for the briefing in real-time by shifting *and* sustaining attention on their preferred agenda for several speaking turns. Beginning only a few turns after Figure 2 left off, the White House is again defending the president's engagement with OFA (turn 23) when the press shifts topic to recent comments made by Afghan President Hamid Karzai (turn 24). The White House and the press continue on this topic for six speaking turns, which constitutes a segment of the briefing. The press corps was speaking when the topic shifted; therefore, they control the briefing's agenda at this moment. We highlight that agenda control by the other party is not necessarily harmful for a given actor. Here, the White House is not being criticized on the Afghan War topic. Rather, this topic was not a priority they raised proactively as they did with bipartisanship in turn 3. The press's agenda control in this instance is harmful to the White House in that the White House lost the op-

Figure 4: White House Briefing Agenda Control (λ) by Presidential Term

Note: Figure visualizes boxplots of our briefing agenda control measure (λ) by presidential term.

portunity to promote a more desired message. Later in the briefing, while the press and the White House are discussing the federal budget (turns 53 and 54), the White House subtly shifts to the president’s deficit-reduction efforts (turn 55), and the press and White House discuss fiscal policy under this framing for 29 consecutive speaking turns. The White House controls the briefing’s agenda in this instance, winning the real-time power struggle.

Operationalizing Briefing Agenda Control

We operationalize the White House’s agenda control in a given briefing by measuring the proportion of speaking turns occurring within segments introduced by the White House. Put differently, our measure accounts for the proportion of speaking turns in the briefing (whether spoken by the White House or press corps) that fall under a topic shift initiated by the White House. Formally, let each briefing $b \in [1, 7071]$ be divided into segments $j \in [1, J_b]$ with a total number of speaking turns T_b . Let $n_{b,j}$ be the length, in number of speaking turns, of segment j . Also let $a_{b,j} \in \{\text{White House, Press}\}$ be the

speaker who initiated the segment. Our measure of the White House’s agenda control at the briefing level is the following:

$$\lambda_b = \frac{\sum_{j=1}^{J_b} \mathbb{1}(a_{b,j} = \text{White House}) \cdot n_{b,j}}{T_b}$$

As a proportion, λ_b ’s bounds are $[0, 1]$, and the press’s briefing agenda control is $1 - \lambda_b$. Figure 4 presents boxplots summarizing λ_b by presidential term. The figure shows that the White House—across all five included presidencies—typically has less agenda control than the press. This makes sense in the briefing context: the press is a group of actors who have opportunities to ask questions while the White House is a singular actor who is often responding. Across our entire dataset, the median share of briefing content controlled by the White House is 21.7%. Figure 4 also shows variation within and across administrations. For example, Obama’s first term displayed nearly half as much agenda control as Clinton’s first term, with median values of λ_b of .192 and .298 respectively. In Appendix C, we show that the variation within presidential terms is not driven by sustained peaks and valleys in the White House’s briefing agenda control. Instead, briefing agenda control fluctuates consistently within each presidential term. In what follows, we systematically examine the conditions under which the White House exerts control over the agenda in the briefing room.

Briefing Agenda Control, 1993–2024

To determine when the White House exercises greater or weaker agenda control within briefings, we specify a series of ordinary least squares regression models at the briefing level. In these analyses, our dependent variable is λ , described above. Higher values are indicative of more briefing agenda control by the White House.

We regress our dependent variable on three key explanatory variables. The first, *Log Opening Statement Length*, is the logged word count plus one of the Press Secretary’s open-

ing remarks before the first substantive press question. The second, *Special Guest(s)*, is an indicator that is 1 when there is at least one additional briefer present beyond the Press Secretary or her designee. We expect both of these variables to be positively associated with λ . The final independent variable, *Divided Government*, takes on a value of 0 when the presidency, House, and Senate are controlled by the same party, and 1 otherwise. We expect this variable to be inversely related to λ . Given the level at which divided government is defined, we cluster standard errors at the two-year Congress level.

Our regression models also account for factors that could obscure the relationship between our independent and dependent variables (see Table 1). First, we include measures of potentially confounding political conditions that could relate to both White House briefing agenda control and our key variables of interest: presidential approval, an indicator for the president's first one hundred days, the proximity of the next federal election, congressional investigations, and whether the Supreme Court heard arguments or released a decision on that day. For example, Congress is more likely to investigate the executive branch when government is divided (Kriner and Schickler 2016) and investigations may prompt more hostile press questioning, thus depressing White House briefing agenda control.

Second, we include measures of external events that may influence both our key explanatory variables and briefing agenda control (Edwards and Wood 1999). Presidents are held responsible for economic conditions. When those conditions deteriorate—measured here as increases in the consumer price index and unemployment rate—the White House may employ first-mover strategies to get ahead of a more hostile press (Clayman et al. 2007). Differently, sudden events such as natural disasters, mass shootings, and terrorist attacks could prompt the White House to try to satisfy the outsized expectation that the president can “do something about everything” (Neustadt 1990, 7) by offering more lengthy opening statements or bringing in relevant officials to offer information and induce the press to be more deferential to the White House as it focuses on collecting infor-

Table 1: Control Variables: Names, Descriptions, and Sources

Name	Description	Source
<i>Political Conditions</i>		
Investigation	Indicator for whether an investigation of the executive branch is ongoing.	Kriner and Schickler (2016)
Presidential Approval	Most recent Gallup poll approval rating.	Gallup
Elections	Indicator for whether the day is between Labor Day and Election Day in a midterm election year or a presidential elections year.	Author coding
First 100 Days	Indicator for whether the date is within the first 100 days of a new presidency.	Author coding
SCOTUS Activity	Indicator for whether the Supreme Court heard arguments or released a decision on that day.	Spaeth et al. (2024)
<i>External Events</i>		
Natural Disaster	Indicator for natural disasters with >\$25M in insurance claims	EM-DAT; Reeves (2011)

mation about breaking news from an official, authoritative source.

Third, the pre-existing news agenda may shape briefing strategies and agendas. Media outlets fixate on a small set of salient issues for extended periods, which change explosively over time (Boydstun 2013). Thus, the briefing agenda may, in part, be pre-determined by ongoing stories. If the Press Secretary opens by responding to an existing story that the press would have asked about anyway, there is a risk we attribute too much influence to the White House. We account for this endogeneity concern as follows. As discussed, we control for several salient real-world events that could prompt sustained media attention and that require a White House response (Behr and Iyengar 1985; Boydston 2013; Edwards and Wood 1999). Second, we control for news pressure under the premise that when the agenda is focused on a narrow set of stories, both actors will be more likely to focus on the same set of issues (Boydstun 2013; Ketelaars and Sevenans 2021). Third, to more directly model this persistence in the news agenda and the briefing, we include a measure of the proportion of unique trigrams (three consecutive words) in a day's opening statement that overlap with those used in any of the previous night's ABC, CBS, and NBC evening news broadcasts. As this proportion increases (decreases), the White House's opening statement contains less (more) novel content. Thus, this measure accounts for the degree to which the White House's briefing agenda control stems from its responses to pre-existing salient issues on the media's agenda rather than its emphasis on other items of concern.

Finally, we include briefing characteristics and fixed effects that could systematically covary with our outcome and key explanatory variables. For each briefing, we include its duration (in minutes), as briefings with longer opening statements and special guests may naturally last longer as well as exhibit more White House agenda control. We also include fixed effects for each president to account for stylistic differences across administrations that might affect briefing agenda control, as well as fixed effects for month and day of week to account for potential seasonality in political events and media attention

(Ketelaars and Sevenans 2021).

Results

Table 2 provides evidence consistent with our hypotheses. In column 1 (excluding control variables), we see that a longer opening statement increases the extent of the White House's agenda control. Moving from a short opening statement (25th percentile, 52 words) to a longer one (75th percentile, 315 words) is associated with a 0.058 increase in agenda control, or about 2 minutes of an average-length 34 minute briefing. The presence of at least one special guest speaker is associated with a 0.099 increase in White House's briefing agenda control, or about 3.4 additional minutes of conversation in the average 34 minute briefing. Finally, divided government is associated with a loss of White House agenda control of -0.035 . When the opposition party controls at least one chamber of Congress, the White House loses over a minute of agenda control during an average briefing. The effect sizes and substantive interpretations are similar when we include a suite of controls in column 2.

However, as we note above, endogeneity remains a concern. In particular, a longer opening statement may be given in the wake of a major event (e.g., war, bill passage), meaning the White House is responding to, rather than leading, news coverage (e.g., Edwards and Wood 1999). Although we cannot fully isolate the causal effect of an opening statement, we conduct two additional robustness tests to assuage these concerns. In column 3, we control for Prior-Night News Overlap for the observations for which we have nightly news coverage (2010–2024). In column 4, we interact this variable with Opening Statement Length. In both models, our independent variables are similarly sized and statistically significant, suggesting our results are not driven by sustained attention to salient events or ongoing news stories. Overall, these results are consistent with our theory. The White House can take steps to increase its influence in the briefing by inviting special guests and by delivering longer opening statements. Political constraints, like divided

government, hamper the White House's influence.

Downstream Influence on the Nightly News

To this point, we have shown that both White House strategies and the balance of institutional power in Washington affect the White House's ability to control the Daily Briefing's agenda. Next, we assess whether the White House's briefing agenda control matters for its broader ability to shape the content of news transmitted to the public. As the Daily Briefing subsidizes journalistic coverage, the White House's ability to control briefing content should influence the stories reporters produce (Cohen 2010; Fahmy et al. 2011; Kioussis et al. 2006, 2016). To do so, we focus on network nightly news broadcasts because they are established media sources with broad-based appeal and their viewership is of particular interest to presidents. The half-hour nightly news programs on the three major broadcast networks—ABC, NBC, and CBS—regularly enjoy the largest audiences among *all* television news programs.⁸ Even as more Americans receive news through social media, network nightly news programs maintain substantial presences on these platforms, regularly posting content from broadcasts that users react to, comment on, and share (Eady et al. 2025). Consequently, these programs continue to play an important role in setting the agenda for the American public (Edy and Meirick 2019). Finally, in a more fragmented and polarized media environment, consumers who tune in to major networks are intentionally selecting a news source that is less partisan and are more ideologically moderate (Arceneaux and Johnson 2013). This viewership is particularly important for presidents as existing research suggests these individuals may be more persuadable than those selecting into partisan sources (De Benedictis-Kessner et al. 2019).

⁸In 2022, the three network nightly news broadcasts enjoyed viewership of between 4.8 to 7.6 million, while the most-watched cable news network (Fox News) garnered only 2.1 million viewers during prime-time (Naseer and Shearer 2023).

Data and Methods

If the White House influences downstream coverage by controlling the Daily Briefing agenda, we should see its language re-used in the nightly newscast. To test this proposition, we use our SITS output to determine which briefing segments were introduced by which actor. That is, we assign all text spoken by either actor to the actor our model labeled as controlling that segment. We then pre-process this text by converting it to trigrams (i.e., three word phrases like “the White House”) and matching it to the trigrams in the ABC, CBS, and NBC nightly newscast transcripts provided by the GDELT Television News Ngram 2.0 Dataset.

To operationalize downstream influence, we compute the set Jaccard similarity for unique trigrams used during segments of the briefing controlled by each actor in the Daily Briefing $i \in \{\text{White House, Press Corps}\}$ and the set of unique trigrams used by the three major news networks $j \in \{\text{ABC, CBS, NBC}\}$ in their nightly newscast on day d (cf. Eatough and Preece 2025; Hager and Hilbig 2020). This procedure results in a set of up to six unique measures of similarity on day d , indexed by i, j (e.g., White House/ABC, Press Corps/ABC, White House/CBS, etc.). For each network j on day d , we take the difference between the White House and Press Corps Jaccard similarity. Formally, our measure of downstream influence is the following:

$$\Delta J_{j,d} = \frac{|T_d^{\text{news},j} \cap T_d^{\text{WH}}|}{|T_d^{\text{news},j} \cup T_d^{\text{WH}}|} - \frac{|T_d^{\text{news},j} \cap T_d^{\text{press}}|}{|T_d^{\text{news},j} \cup T_d^{\text{press}}|},$$

where $T_d^{\text{news},j}$ is the set of distinct trigrams for network j on day d , T_d^{WH} for White House-controlled trigrams on day d , and T_d^{press} for press corps-controlled trigrams on day d . This measure captures downstream influence in that it increases (decreases) on days when a nightly news broadcast uses more trigrams used during segments of the briefing controlled by the White House (press corps) during the Daily Briefing—after accounting for the set of all trigrams that were used during segments of the briefing controlled by either

actor. We standardize these measures of Jaccard similarity to facilitate interpretation and comparisons across networks.

We measure downstream influence on all days on which a White House Daily Briefing occurred and at least one network aired a broadcast, beginning on July 14, 2010 and ending on April 4, 2024.⁹ The final dataset contains 2,355 days, of which nearly all contain overlap for both actors. On average, the White House and newscasts have 26 shared trigrams. For the press corps, that number is 43.

In Table 3, we present the days on which the Obama, Trump, and Biden White House each had the most downstream influence relative to the press corps. Note, these days are outliers, so there are more shared trigrams than the average. For parsimony, we present a random subset of trigrams that contain one or fewer stopwords (see Appendix E.2 for all shared trigrams on these days). Of particular interest is Trump’s most influential briefing, which occurred in the wake of a scandal where the president had told a fallen service member’s widow that her deceased husband “knew what he was getting into.” The president’s Chief of Staff, John Kelly, led this briefing, providing background about his own son’s death in combat. Although a response to scandal, the White House was able to use a special guest to control the agenda and influence downstream coverage. President Obama’s most influential day came after the death of Osama Bin Laden, while Biden’s came during the withdrawal from Afghanistan, where Press Secretary Jen Psaki, accompanied by National Security Advisor Jake Sullivan, defended the president’s decision.

We look at the same relationships for the press corps in Table 4. President Obama’s weakest day came in the wake of the Benghazi attack. President Trump’s came on the heels of the Parkland school shooting. During that briefing, the press corps quickly changed the topic to developments in the Russia investigation, and their questions about the shooting often revolved around the president’s lack of policy action. Interestingly,

⁹As the GDELT dataset begins in 2010, we acknowledge that our results may not generalize across our full time series. We suspect any difference would advantage the White House in an era without widespread internet to promote alternative narratives.

Table 3: White House and Network News Trigram Overlap

Date	President	Trigrams	Jaccard
05/04/2011	Obama	laden was killed, keep in mind, the united states, very graphic photos, that osama bin, stuff as trophies, graphic photos of, absolutely certain that, a propaganda tool, osama bin laden's, done dna sampling, not floating around, incitement to additional, bin laden is, need to spike	4.64
10/19/2017	Trump	let me tell, my first recommendation, that president obama, reason to enlist, call my family, cases we're talking, no perfect way, to four families, thought at least, on active duty, say to four, the best men, don't believe president, job and talked, my son's case	11.12
08/17/2021	Biden	the white house, the kabul airport, americans and afghans, the buck stops, decision to leave, assessments you're describing, and president biden, also taking responsibility, bloodshed that may, into specific intelligence, be happening right, every decision the, past couple of, he taking responsibility, last few days	4.62

Note: Overlapping trigrams between the White House and nightly newscasts for the day on which the Obama, Trump, and Biden White House had the most downstream influence relative to the press corps. This table presents a random subset of 15 trigrams that contain one or fewer stopwords per day.

Biden's least influential day was his first in office. Here, NBC news allocated over 20 minutes of the newscast to airing the briefing, which induces considerable overlap. However, on this day, the press controlled a large number of trigrams given that the White House held a wide ranging conversation about the administration's priorities and was responsive to discursive shifts.

Taken together, these descriptive results accord with our expectations. The White House has strong downstream influence when they take a proactive posture on events, and especially when special guests are present, but has weak downstream influence when they are unable to get ahead of negative events or allow for wide-ranging discussion.

As our downstream influence outcome is measured at the day-level and the White

Note: Overlapping trigrams between the press corps and nightly newscasts for the day on which the press corps had the most downstream influence relative to the Obama, Trump, and Biden White House. This table presents a random subset of 15 trigrams that contain one or fewer stopwords per day.

House sometimes holds more than one briefing per day, our measure of White House briefing agenda control is averaged across all briefings for that day (i.e., all λ_b on day d). We standardize this variable to facilitate interpretation. We conduct our analysis for each news network separately and include an analogous set of controls and fixed effects as in the previous section. We sum the total length of all opening statements and of briefings.

As in our Daily Briefing analysis, there is a concern about endogeneity and persistence in the news cycle. Anticipating the press will be interested in major events covered by the nightly news on day $d - 1$, the White House may reference these events in its opening statement on day d . When the nightly news reports on the events on day d , the White House may *appear* influential when it was merely speaking to already-salient issues. In

particular, a higher λ_b mechanically expands the share of trigrams attributed to the White House, increasing the potential for overlap with downstream coverage. We mitigate concerns that White House responses to salient issues may appear to influence downstream news coverage through two supplemental analyses. First, we iteratively remove trigrams used by network news in days $d - 3$, $d - 2$, and $d - 1$ from the briefing transcripts in day d . To get “credit” for controlling the agenda, an actor in this model must introduce *novel* trigrams that did not appear in the previous three days of broadcasts. Second, we run additional models that exclude days where the opening statement was in the top quartile or top half for length, respectively. Long opening statements may be correlated with salient, complex, ongoing events where the White House can leverage its informational advantages to subsidize press coverage, and a longer opening statement mechanically inflates $\Delta J_{w,d}$ since the White House controls more trigrams. These two analyses address distinct threats to inference: the first accounts for the persistence of salient stories; the second excludes days where the White House’s speaking volume could mechanically inflate the dependent variable.

Results

In Table 5, we provide support for our hypothesis. Across all networks, when the White House has stronger briefing agenda control, network broadcasts are more likely to mirror the White House’s language. For example, in the first two models, we show that a one standard deviation increase in λ , the proportion of speaking turns on which the White House controlled the agenda, is associated with 60% of a standard deviation increase in shared trigrams between ABC’s nightly news coverage and the White House’s agenda-controlled text (relative to the press corps). Substantively, this result is equivalent to a shift in nine White House trigrams, representing a 36% increase over the mean. Results for the other two networks are similar in size, direction, and statistical significance.

The supplemental analyses presented in Tables E1 and E2 also support these conclu-

sions. In Table E1, we show that the relationship between briefing agenda control and nightly news coverage persists even when focusing only on novel trigrams, suggesting the effect of White House briefing agenda control on downstream coverage is not only a

product of responsiveness to salient issues. In Table E2, we show that this relationship also remains when we exclude longer opening statements that may naturally produce more White House influence on downstream coverage.

Our results provide evidence that agenda control in the White House Daily Briefing is correlated with downstream news coverage on the three major nightly newscasts. When the White House exercises more agenda control during the briefing, the major news networks adopt specific language under the White House's agenda. To the extent that the White House influences the public through downstream influence on the news, their efforts to control the Daily Briefing seem well-justified.

Conclusion

When is the White House able to shape the media's agenda? The media serves as a key intermediary between the president and the public whose opinions he hopes to shape. Thus the president's ability to affect public opinion is conditional on whether and how the media transmits his messages. To study this question, we focus on the White House's ability to control the agenda in the Daily Briefing. Consistent with expectations, we find that the White House has more briefing agenda control when the Press Secretary delivers a longer opening statement and when she brings special guests to the briefing. However, White House agenda control declines during divided government when the opposition is weighted more heavily in the indexing process. Then, we show that briefing dynamics are related to the downstream news coverage Americans consume. Nightly news broadcasts increasingly adopt the specific language used during portions of the briefing the White House controlled on days the White House has more briefing agenda control. Together, these results show that the White House's influence over the media, and thus what the public is likely to learn about the president, is conditional on strategic choices and political context.

This research contributes to our understanding of presidential agenda-setting and going public by providing novel theory and evidence about White House media agenda-control (Cavari 2017; Cohen 1995; Canes-Wrone 2006; Kernell 1997; Rottinghaus 2010). Although some scholars have considered White House-press dynamics (e.g., Cohen 2010; Eshbaugh-Soha and Peake 2011; Franco, Grimmer and Lim n.d.), we highlight the conditional nature of this influence. Our study is also one of the first to quantitatively examine the White House Daily Briefing—a unique form of going public that is interactive, institutionalized, and routine (but see Meyer-Gutbrod and Woolley 2021).

We have considered some, but not all, factors affecting White House agenda control in the briefing room. Future research should consider that the White House may have more success influencing the agenda on topics where it is more empowered (e.g., foreign policy) or on those that are more technical (e.g., environmental permitting). Scandal magnitude and duration also likely limit the White House's briefing agenda control. Finally, there is variation across administrations in the media relations strategies and rhetorical techniques they employ. For example, the Trump administration took an especially negative tone in the briefing room (Meyer-Gutbrod and Woolley 2021). This variation could further shape agenda control and downstream news influence. There are also many ways in which presidents try to shape news coverage and public opinion beyond the Daily Briefing: presidents give speeches, post on social media, create or attend events, and interact with the press through press conferences. Future work could look at the relationship between all of these tools and investigate their influence on downstream news coverage. Additionally, as the second Trump administration makes modifications to the Daily Briefing and its general posture towards the press, future scholars should examine how these modifications affect the White House's ability to influence the press's agenda and shape subsequent coverage. Given the administration's interest in inviting non-mainstream outlets who are typically friendly to the administration and intimidating and punishing traditional outlets for unfavorable coverage, we expect the second Trump

administration's briefing agenda control is higher than in past administrations. However, it is important to keep in mind that such strong presidential influence over the press is not normatively desirable. The people, who are the ultimate sovereigns in the United States, depend on a free and independent press to learn about the president and exercise accountability (De Tocqueville 1835).

Presidents rarely influence public opinion directly, yet they are key actors in American politics who attract considerable press attention. This coverage can benefit presidents—but only when that coverage aligns with the narratives they want to promote. Given that the media has incentives to deviate from what presidents want, the White House must spend time and resources attempting to influence the press's agenda through the agenda building process. Although few people watch the back-and-forth between press secretary and press corps, events in the room matter to those present given the consequences for how the White House is portrayed to the public.

A Press Briefings Dataset Creation

On April 9, 2024, we downloaded all available White House press briefings from the The American Presidency Project (APP) maintained by UC Santa Barbara. At this time, APP classified 7,226 documents as “Press Briefings.” After removing duplicates and clearly misclassified documents, we were left with 7,203 press briefing transcripts. We estimate the topic model with this sample. However, in our analyses, we remove briefings from the lame duck period for each president, resulting in 7,071 briefings.

While the vast majority of these briefings are formal Daily Briefings (5,081, or 71.9%), they also include transcripts of other interactions between administration officials and reporters such as background briefings and press gaggles. We retain all documents classified as Press Briefings because they share important structural similarities—namely they are on-the-record contexts where the White House convenes members of the press corps to engage in dialogue with an administration official and in which the White House later posts the transcript of the dialogue to its website (from which APP obtains its Press Briefing documents). Additionally, we retain all documents because the White House may replace a traditional Daily Briefing with an alternative press dialogue, such that that dialogue becomes the de facto “daily briefing” for that day (e.g., when the president is away from the White House, informal gaggles with the Press Secretary or her designee often take the place of a traditional briefing).

The documents were located at the following link at the time of data collection: <https://www.presidency.ucsb.edu/documents/app-categories/press-office/press-releases/>

press-briefings. In addition to downloading the HTML of each individual press briefing, we collected the following metadata provided by APP for each briefing if available—date, title, start time, end time, president, and citation.¹⁰

We used information provided within each press briefing transcript to create a dataset at the speaking-turn level. Our dataset describes the speaker and the speaking turn’s text for each turn in each press briefing. The press briefings refer to the White House Press Secretary by name when they are speaking. When other guests or White House officials are present and speaking, their identity is also typically associated with their speaking turns in the transcript. Because our goal is to understand the agenda-setting ability of the White House as a strategic player in the briefing room, we consolidate all White House speakers identified as “White House.” Differently, when the speaking turn is a question or comment from the press, the transcript typically denotes the speaker with a “Q,” and thus we almost always do not have access to the identity of the individual speaker.¹¹ Consequently, all press speaking turns are attributed to a collective “Press” actor.

B Text Preprocessing

We focus on the conditions under which the White House, relative to the press, controls the agenda of press briefings. Therefore, we associate each speaking turn with one of these two “speakers”—the White House or the press. We define each “speaking-turn” in our dataset as all consecutive words spoken by either the White House or the press. For example, when the White House has a guest speak in the briefing, the Press Secretary and the guest may speak consecutively. This would be considered one speaking turn by the White House in our data. In our dataset, 332,955 speaking turns were taken by the press. An additional 338,078 speaking turns were taken by White House officials or guests. When removing the lame duck period, 328,101 speaking turns were taken by the press and 333,117 speaking turns were taken by the White House.

We pre-process the text by removing all transcript annotations (e.g., “(Laughter),” “(Cross-talk),” “(Inaudible)”), punctuation, symbols, and numbers. We also split hyphenated words into separate tokens. We tokenize the text at the word level and remove a common list of 175 English stopwords. We also remove titles and names of the speakers in the dataset as well as names of the following individuals/organizations: the five presidents in our data, all Press Secretaries who served under those presidents, other White House staff who appeared frequently as speakers (more than 150 times), a list of notable White House

¹⁰While the metadata associated with the transcripts downloaded from APP was largely parsed correctly, there were some limited instances of missing or invalid information in the time cells. Most of these cases stemmed from the transcripts provided by the White House’s website, from which APP collects its documents, not including that information. In cases of missing or invalid information about time, we filled in missing values by referring back to the original White House document, reviewing videos of the briefings on CSPAN or YouTube (when possible), and reviewing the text of the briefing and associated news articles for context clues. Our dataset includes non-missing values for time in 98% of cases.

¹¹The press is also occasionally denoted in the following ways: “Q”, “THE PRESS”, “PRESS”, “REPORTER”, “PRESS CORPS”, “QQ”, “QUESTION”, “AUDIENCE”, “Female”, “Male”, “CNN”, “CBS” and rarely by name.

correspondents compiled by Wikipedia,¹² a list of news outlets on White House Correspondents Association seating charts, and approximately 836 common first names from the babynames package (those assigned to over 0.1% of babies in a given year). However, we manually review and preserve a small subset of homonyms like summer and major and those that are also important place like Alberta. We remove speaker names because we want the model to create coherent topics that are not necessarily time-specific. If briefings during both the Biden and Clinton presidencies used similar language to discuss the economy, we do not want the model to determine these are distinct topics *only* because a different president’s name was invoked during the discussion.

We determine whether there is a special guest by seeing if there are two or more unique non-press speakers. If so, someone other than the press secretary spoke during the briefing. However, oftentimes White House aides will interject with a short speaking turn to alert the Press Secretary of something. Therefore, we devised a coding rule to remove such instances from counting as a special guest speaker. Our decision rule was that a special guest could not be someone who 1) had three or fewer turns, 2) spoke less than 50 total words, and 3) did not speak first.

We then implement stemming. After stemming, we remove tokens with less than four characters. Finally, we remove extremely rare and extremely frequent terms. We remove terms mentioned less than five times (19,645 tokens) or more than 50,000 times (30 tokens) in the entire corpus.

Our final document-term matrix has 671,033 speaking turns and 16,963 unique tokens. There are an average of 93.2 turns per press conference, and an average of 17.3 tokens per speaking turn after preprocessing. When removing the lame duck period, there are a total of 661,218 turns with an average of 93.5 speaking turns per briefing.

To measure the length of the White House’s opening statement, we determined where the first substantive press turn occurred and considered all White House speech before that point as their opening statement. The briefings often start with pleasantries between the White House and the press (e.g., exchanging “Good morning”), therefore, we consider the first press turn that used at least five tokens *after* our preprocessing steps that removed such pleasantries to when the briefing exchange began.

C SITS Model

C.1 Estimation

To estimate the parametric SITS model, we use a publicly available Java software written by Viet An Nguyen (Nguyen et al. 2014). The software implements a Gibbs sampler. The starting values for the sampler are randomly assigned. We run 50,000 iterations, discarding the first 45,000 as burn-in iterations. Because of the large size of this corpus, we retain every 1000th iteration of topic assignment parameters after burn-in (rather than all 5,000), and describe topics using the mode of the five sampled values. Finally, we do not estimate turn-level topic shifts for speaking turns with less than 5 tokens.

¹²“White House Press Corps: Notable Correspondents.” *Wikipedia*, accessed October 10, 2024, https://en.wikipedia.org/wiki/White_House_press_corps#Notable_correspondents.

We select hyperparameter values according to advice in the literature. Griffiths and Steyvers (2004) recommend $\alpha = 1/K$ and $\beta = .1$. Additionally, we choose a noninformative, uniform prior ($\gamma = 1$) over speaker agenda-setting parameters. Finally, we primarily choose $K = 50$ using our domain expertise and our desired granularity of topics. The press briefings will have major topics in common across the five presidencies (e.g., education policy), but the briefings will also have topics unique to the political moment (e.g., Covid-19 response efforts). We wanted to capture both. However, the topics themselves are not our primary interest. Our primary goal is modeling topics appropriately such that we identify meaningful locations of topic shifts that occur within a briefing.

We ran three chains of the $K=50$ model with different starting values. We average turn-level shift parameters across the three chains. If this averaged turn-level shift parameter, which is a probability, is greater than 0.5, we consider the speaking turn a topic shift. We identified one chain that had better topic cohesion than the others. We use this chain for any topic-related analyses.

C.2 Validation Exercise

Prior work has validated SITS model estimates, including turn-level shifts, segments, and topics across several types of political discourse, including informal political discussions, formal political deliberations, presidential debates, online discussion, and political talk shows (Nguyen, Boyd-Graber and Resnik 2012; Nguyen et al. 2014; Rossiter 2022). However, because SITS has not been used or validated in the press briefing context, we conduct a human-coder validation of the model’s identification of turn-level shifts.

As measures from an unsupervised topic models require problem-specific validation (Grimmer and Stewart 2013), we focused our validation exercise on the key model parameter of interest for our study—the turn-shifting component (i.e., our binarization of the turn-level shift parameter, which signifies when the White House or the press shifts the topic of the discussion). We constructed a validation sample by randomly sampling from 200 randomly drawn briefings, and a research assistant completed the task associated with the first 168 briefings in the sample. Within each briefing, we randomly selected two consecutive segments (excluding the opening statement portion of the briefing) identified by SITS, such that only one model-identified shift occurred in the sampled portion of the briefing. In the completed sample of 168 briefings, there was a total of 2009 speaking turns. The average length of the pair of segments was 12 speaking turns (standard deviation of 10) with a range of [2,69]. The trained research assistant was asked to identify which speaking turn in each sampled briefing portion they believed shifted topic. Therefore, this exercise provides us with $n=168$ observations to assess agreement between the model and the human coder.

We highlight two important features of this validation exercise. First, rather than sampling a small number of full briefings, we drew only two consecutive segments from a larger number of briefings to capture a wide range of political contexts and interpersonal dynamics in the briefing room and to reduce coder fatigue. Second, while it is unconventional to use model output in constructing the validation task (i.e., by sampling consecutive SITS-identified segments), doing so allowed us to focus the validation on whether

the model’s location of a topic shift was also perceived by a human to be a meaningful shifting location.

We find that the model and the human coder agree 65% of the time about the exact location where a topic shift occurred, with a mean absolute difference was 1.83 turns, compared to a 27.6% random baseline.¹³ Because we score agreement as the model and the human coder identifying the same specific turn, disagreement by even a single speaking turn is counted as a disagreement, making this a difficult task given the nature of precise locations of a shift in a press briefing being difficult to pin down due to gradual transitions between topics, digressions, interruptions, and speakers attempting to redirect attention, avoid certain subjects, or reframe questions.

Although the model and the coder sometimes disagree on the precise location of a shift, they agree on *which speaker* initiated the shift in 86% of cases. This is the quantity that matters most for our measure of agenda control. Even if the exact speaking turn differs between the model and the coder, they largely agree on which actor exerted control over the discussion at that moment. Moreover, when we examine the 14% of cases where the model and the human coder disagree about who initiated the shift (n=24 cases), we find that disagreements are evenly distributed across actors. In 12 of 24 cases, the model attributed the shift to the press while the human coder attributed it to the White House, and in the other 12 cases the reverse occurred. In sum, when the human coder and the model disagree about the precise location of a shift, there is no evidence to suggest that the model systematically over-attributes agenda control to either actor.

Taken together, these results indicate that the model identifies shifts at locations human readers find meaningful, the model and the human coder generally agree on which actor shifts the topic of discussion, and, the model does not systematically over-attribute agenda control to either the press or the White House relative to human interpretation.

C.3 Topic Shift Example

Below, we provide the full text from the excerpted examples in the paper.

- Turn 3. (Shift) White House: We’ll see. I like the idea in theory, anyway. I have no announcements to make. You obviously know much of what’s on the President’s schedule this week, including his visits to Capitol Hill on Tuesday, Wednesday, and Thursday to meet with Senate Democrats on Tuesday, House Republicans on Wednesday, Senate Republicans on Thursday and House Democrats also on Thursday. While he’s there he will want to discuss a range of priorities including, of course, conversations he’s been having on budget-related issues, the need to reduce our deficit in a balanced way, but also immigration reform and the progress that’s being made on that subject in a bipartisan way, efforts to move forward on actions to reduce gun violence – also efforts that involve both Democrats and Republicans.

¹³We exclude the first turn of the first segment from our performance metrics since the research assistant knows the model has identified this as a shifting turn. We also exclude speaking turns containing five words or fewer after preprocessing from our performance metrics, as the model does not consider such short turns eligible for topic shifts during estimation. Excluding these turns makes the random baseline higher (27.6%) than if we included them (17%).

Other items that are on his list of priorities include increasing our energy independence, the need to do something about the pace of nominations being confirmed and considered in the Senate – judicial nominations, in particular – as well as the need for Congress to take action on cybersecurity. With that, I'll go to Jim.

- Turn 4. (Shift) Press: Thanks, Jay. So since we are on week two of the charm blitz – on Wednesday, as you mentioned, the President is going to the Hill, but he's also speaking to Organizing for Action, which is the group that grew out of his campaign reelection. And I'm wondering whether there's potentially a mixed message there. Because last week OFA sent out an email saying that – calling Republicans obstructionists, blaming them for the sequester, saying if only they had voted for closing tax loopholes the public wouldn't be in this jam. So is there a mixed message there from the President, on the one hand appealing to and speaking to Republicans on the issues you just mentioned, and then going to OFA, potentially a partisan – a more partisan address?
- Turn 5. (Shift) White House: Organizing for Action, as you know, Jim, was established to promote the President's public policy agenda. It is certainly the President's position that sequester has been implemented because Republicans made a choice. Rather than go along with a balanced approach to deficit reduction, rather than go along with either a buy-down or the deal that has been on the table since the President tried to negotiate it with Speaker Boehner last year, they said, no way, no how, and the choice they made was to allow sequester to be implemented. Let's be clear about that. And that is not a position that we'll take a different view on. It is also the case that sequester is here; it's being implemented as a result of the choice made on Capitol Hill by Republicans. And it is another reason why we should engage with and move forward – engage with Republicans and Democrats on the Hill and move forward with at least the potential for bipartisan, balanced deficit reduction that deals with the sequester and the larger goal of more than \$4 trillion in deficit reduction over a decade. That's the nature of the conversations the President has been having with Republican lawmakers, including in his dinner with Senate Republicans last week, including in his lunch with Chairman Ryan and Congressman Van Hollen. And I'm sure it will be one of the topics that he raises in his meetings on the Hill this week. So I think that as the President said in his inaugural address, we should not believe that we need to resolve all of our differences before we can move forward on common – working together, taking action together to achieve results for the American people; meeting on common ground, putting forward solutions that represent compromise, much as the President has put forward solutions that represent compromise, whether it's on immigration reform or legislation that deals with gun violence or balancing – getting our fiscal house in order in a way that's balanced so that the burden is not borne solely by seniors and middle-class families. I think there's a great deal of consistency in what the President has proposed and what he's been saying for many, many months now.
- Turn 6. (Shift) Press: Washington is a place of optics, too, and is it diplomatic to be thinking of – be speaking to a partisan group on the same day that he's speaking to –
- Turn 7. (Shift) White House: First of all, I think you're misrepresenting the group.

As I understand it, as I've read about it, it will not take a position in elections; it's focused on policy issues. And the President's policy agenda, which Organizing for Action has been designed to promote, consists of item after item that have had bipartisan support in the past, that should have bipartisan support in the future. I mean, there's nothing partisan about deficit reduction. In fact, you might even say it's more of a priority for Republicans than Democrats. And yet the President is pushing for a balanced package that would achieve the goal of over \$4 trillion in deficit reduction over a decade. And that includes a proposal that produces significant savings from entitlement reform as well as savings from tax reform. There's nothing partisan about comprehensive immigration reform. There's a bipartisan effort underway in the Senate right now – Democrats and Republicans pushing forward an effort to produce legislation that would achieve that bipartisan goal. In the wake of Newtown, I would argue that there's nothing partisan about common-sense solutions to reduce gun violence in America. The victims of gun violence aren't Democrats or Republicans, especially when they're children. And there ought to be – and there is – a path forward to reduce gun violence in America, much as the President laid out, that respects our Second Amendment rights. As you know, nothing the President has proposed, whether it's executive action or legislative action, would take a single firearm away from a single law-abiding citizen.

- Turn 23. White House: No, the organization – look, there are organizations all over Washington and around the country that support policy agendas and policy areas. That's what this organization does. And I would refer you to them for more details on their efforts. They are not, as I understand it, again, based on news reports, engaged in political campaigning – winning elections or helping candidates win elections. They're focused on the policy proposals. The President speaks to the DCCC and the DNC and the DSCC. He'll speak to other outside organizations that have policy agendas. And that's entirely appropriate. And the President is pursuing a policy agenda, as I noted earlier, that is inherently bipartisan, that is embraced by a majority of the American people both in general, as we saw in the election, and in the specifics. And the President obviously believes that engaging the American people in our policy debates is very important. That's what the election was all about. And he believes that when the American people are engaged in these debates, the outcomes of the debates are better for the American economy and for the middle class. Mary.
- Turn 24. (Shift) Press: Jay, over the weekend, Afghan President Hamid Karzai said the U.S. is encouraging violence in conjunction with the Taliban to prolong the U.S. presence in Afghanistan. He said the Taliban were killing Afghan civilians "in service to America." What was the President's reaction to hearing this?
- Turn 25. White House: I think Secretary Hagel and General Dunford spoke to this yesterday and made clear that any suggestion the United States is colluding with the Taliban is categorically false. Secretary Hagel addressed these questions directly with President Karzai in their meeting. The United States has spent enormous blood and treasure for the past 12 years supporting the Afghan people and ensuring – in the effort to ensure stability and security in that country. The last thing we would do is support any kind of violence, particularly involving innocent civilians.

- Turn 26. Press: Do Karzai's comments and this kind of mounting tension harm or impact U.S. plans to withdraw?
- Turn 27. White House: The President has a policy that has been embraced by NATO, by our allies in the coalition, and we are pursuing that policy. That includes we've drawn down the surge forces and we're winding down our troop presence in Afghanistan as we build up Afghan security forces and turn over security lead to Afghan security forces. And that progress continues. There is no question that there have been a number of difficult security incidents, and there have been comments by President Karzai with which we've disagreed. But our policy has not changed. And what's important to remember is we went into Afghanistan because we were attacked from Afghanistan. We went into Afghanistan – and the President made sure that we refocused on this goal when he reviewed Afghan policy upon becoming President – in order to go after those who attacked the United States, go after those who killed Americans, to go after al Qaeda central, which had taken haven in Afghanistan. And that remains the principal objective of our mission in Afghanistan: to defeat – to disrupt, dismantle and ultimately defeat al Qaeda in the Afghanistan region; to, in service of that goal, build up – train and build up Afghan security forces so they can take over security for their country; and to provide the space necessary for the Afghan government to increase stability in that country and to allow us to continue to go after al Qaeda, which is, again, our primary objective.
- Turn 53. White House: We are engaging with Senate Democrats, with House Democrats, with Senate Republicans and House Republicans, as you know, on budget issues as well as on the broader agenda that we've been talking about –
- Turn 54. Press: But now that they're drawing up their budget –
- Turn 55. (Shift) White House: I'm sure there are conversations going on, on that process. We are engaged in our own process. And the President had lunch with Chairman Ryan last week, and I know they talked about his budget, which I believe is going to be released very soon. The broader effort underway here is to try to, through the budget process, achieve a compromise that allows for both entitlement reform and tax reform that produce the savings necessary to achieve that \$4 trillion-plus target over 10 years of deficit reduction, to put our economy on a fiscally sustainable path. And that is the President's goal: deficit reduction large enough to put our economy on a fiscally sustainable path so that the ratio of debt to GDP is below 3 percent for a period of time that would allow, concurrently, through investments and other policy decisions, allow the economy to grow, to become more energy independent, for the middle class to strengthen and grow. I think this is one of the things that – because I suppose that your question gets at this – is that the President has always believed that deficit reduction is not a goal unto itself. The whole purpose of deficit reduction should be part of an overall policy objective of strengthening the economy, having it grow faster, having it create more and better jobs for the middle class. And that's the President's objective. And that's why he has always, throughout these budget debates and going back to when he first took office, made sure that the proposals he's put forward keep the number-one objective in mind, which is economic growth and job creation, not deficit reduction solely for the purpose of reducing the deficit.

- Turn 56. Press: Is there going to be a goal – obviously Paul Ryan has got a 10-year target. Is the President going to have a target, whether it's 10 years, 15, 20, whatever –
- Turn 57. White House: The President will have a target for deficit reduction over 10 years, as he has consistently in his budget –

C.4 Estimated Topics

Below, we show the 15 FREX topwords for each of the 50 estimated topics. Recall, each topic is a distribution over all unique words in the pre-processed corpus. In our corpus, the vocabulary is 16,963 words. Most of the words will have a probability of zero in the topic's distribution and only a handful of words will be meaningful indicators that a discussion is on a given topic.

Also recall SITS is a mixed-membership topic model, so each text is a mixture of the 50 topics. For example, consider just one segment in which the model predicts the White House set the agenda and attention was sustained on that discussion for several speaking turns. Most topics will have a probability of zero in any single segment because only mixture from a handful of topics will be needed to explain the content. Perhaps it is a mixture of Topics 1 and 13 in which the White House is talking about education policy and the budget. Or, it may be a mixture of Topics 1 and 34 in which the White House is discussed their response to a natural disaster in terms of aid to resume schooling.

Topic 1	student, school, teacher, colleg, child, educ, welfar, classroom, poverti, parent, graduat, borrow, district, incom, children
Topic 2	vote, senat, floor, mcconnel, caucus, lott, major, daschl, filibust, democrat, impeach, pelosi, reid, schumer, republican
Topic 3	maliki, iraqi, baghdad, iraq, sectarian, sunni, anbar, reconstruct, shia, insurg, victori, bremer, provinc, allawi, forc
Topic 4	intellig, classifi, inform, declassifi, benghazi, surveil, leak, fisa, gather, interrog, techniqu, sourc, commiss, oversight, assess
Topic 5	vessel, anthrax, airlin, aircraft, passeng, carrier, postal, fish, spill, monument, airspac, ocean, pipe, riser, ship
Topic 6	ukrainian, ukrain, zelensky, putin, russia, vladimir, crimea, russian, invas, separatist, kyiv, territori, impos, sanction, escal
Topic 7	emiss, carbon, greenhous, opec, energi, gasolin, price, climat, petroleum, fuel, pollut, electr, coal, solar, clean
Topic 8	serb, milosev, bosnian, qaddafi, bosnia, kosovo, libyan, serbia, peacekeep, libya, unprofor, dayton, sarajevo, kosovar, serbian
Topic 9	afghan, afghanistan, karzai, taliban, troop, mission, combat, command, kabul, presenc, forc, drawdown, uniform, train, armi
Topic 10	prescript, solvenc, medicar, tobacco, drug, senior, cancer, social, smoke, retir, beneficiari, addict, cigarett, opioid, veteran
Topic 11	counsel, email, privileg, letter, subpoena, document, testifi, testimoni, lawyer, memo, inquiri, archiv, juri, file, client

Topic 12	investig, justic, secret, alleg, prosecutor, pardon, comey, snowden, depart, crimin, indict, charg, trial, prosecut, independ
Topic 13	billion, budget, spend, estim, dollar, surplus, discretionari, fiscal, project, earmark, offset, assumpt, deficit, revenu, score
Topic 14	iranian, iran, iaea, sanction, enrich, nuclear, obtain, uranium, plus, behavior, verifi, complianc, intern, acquir, centrifug
Topic 15	arafat, saudi, palestinian, arabia, abba, ireland, east, peac, arab, isra, settle-ment, jerusalem, crown, barak, israel
Topic 16	abort, marriag, discrimin, court, lawsuit, legal, statut, litig, constitut, amend, tortur, appeal, affirm, execut, rule
Topic 17	phone, convers, readout, regular, contact, updat, call, touch, spoke, spoken, communic, consult, read, team, brief
Topic 18	tariff, nafta, trade, japanes, japan, steel, export, agreement, canada, apec, framework, doha, fast, gatt, canadian
Topic 19	ceil, shutdown, default, veto, bill, debt, shut, congress, fund, rider, supple-ment, attach, budget, republican, limit
Topic 20	brazil, summit, asia, pacif, asean, indo, partnership, global, australia, india, indonesia, bilater, hemispher, argentina, prosper
Topic 21	nigeria, africa, nigerian, african, mandela, pope, sudan, egypt, ethiopia, con-tin, kenya, egyptian, zimbabw, uganda, ghana
Topic 22	laden, osama, musharraf, pakistani, qaeda, 11th, terrorist, terror, plot, pak-istan, attack, enem, septemb, counterterror, threat
Topic 23	twitter, stori, media, journal, newspap, tweet, editori, quot, apolog, fals, articl, transcript, book, anonym, televis
Topic 24	migrant, mexican, border, asylum, mexico, deport, migrat, immigr, patrol, illeg, daca, traffick, colombia, refuge, alien
Topic 25	taiwan, chines, china, bejj, hong, kong, vietnam, jiang, vietnames, lama, dalai, philippin, strait, currenc, relationship
Topic 26	valu, acknowledg, observ, advoc, profession, illustr, argument, pretti, vari-eti, kind, genuin, articul, guess, interest, testament
Topic 27	korean, korea, missil, peninsula, treati, denuclear, ballist, jong, nuclear, pro-lifer, india, nonprolifer, south, dprk, reactor
Topic 28	voter, romney, poll, ballot, campaign, mitt, reelect, race, candid, elect, trail, elector, fundrais, primari, midterm
Topic 29	assault, polic, firearm, crime, shoot, hate, victim, violent, racial, tragedi, flag, antisemit, ferguson, sexual, newtown
Topic 30	legisl, reform, congress, comprehens, bipartisan, pass, immigr, congression, piec, prioriti, forward, move, propos, enact, senat
Topic 31	cyber, cybersecur, agenc, comput, technolog, sector, ransomwar, space, in-ternet, nasa, entiti, digit, licens, actor, softwar
Topic 32	manchin, yeah, inflat, ahead, incred, healthcar, lower, forget, maga, childcar, sinema, breath, histor, tiktok, compon
Topic 33	isil, assad, syrian, syria, fighter, airstrik, coalit, opposit, insid, counter, de-grad, turkey, extremist, yemen, kurdish

Topic 34	fema, hurrican, storm, disast, puerto, rico, flood, orlean, louisiana, flint, mississippi, leve, earthquak, rebuild, florida
Topic 35	vaccin, dose, virus, mask, variant, booster, infect, covid, omicron, coronavirus, ebola, outbreak, pfizer, unvaccin, symptom
Topic 36	hussein, saddam, chemic, inspector, disarm, destruct, mass, unscom, resolut, weapon, biolog, council, disarm, inspect, annan
Topic 37	cuban, cuba, guantanamo, castro, aristid, haitian, haiti, venezuela, detainee, prison, venezuelan, burma, griner, detain, gitmo
Topic 38	yeltsin, greec, greek, chernomyrdin, german, chechnya, sweden, europ, germani, merkel, franc, membership, nato, european, moscow
Topic 39	tomorrow, speech, schedul, tonight, trip, thursday, preview, wednesday, radio, monday, friday, travel, saturday, tuesday, tune
Topic 40	ceremoni, medal, attend, recept, commemor, queen, dinner, museum, luncheon, lawn, arlington, tour, celebr, wednesday, wreath
Topic 41	golf, basebal, birthday, nice, rahm, gentlemen, sport, knee, gift, sleep, daughter, basketbal, pete, ladi, laugh
Topic 42	sens, notion, differ, easi, problem, realiti, complex, percept, honest, solv, realli, somehow, defin, somewhat, perspect
Topic 43	nomin, vacanc, nomine, garland, bench, qualif, appoint, qualifi, judici, suprem, judiciari, confirm, robert, court, fill
Topic 44	review, recommend, deadlin, decis, option, timelin, date, process, soon, timet, final, evalu, wait, decemb, januari
Topic 45	unemploy, growth, forecast, quarter, rate, inflat, economist, recess, economi, stimulus, recoveri, creation, econom, grow, trend
Topic 46	insur, enrol, afford, obamacar, health, care, premium, coverag, websit, medicaid, preexist, uninsur, marketplac, repeal, qualiti
Topic 47	hama, gaza, hezbollah, lebanon, ceasefir, rafah, lebanes, israel, isra, casualti, civilian, houthi, rocket, hostag, innoc
Topic 48	bank, financi, mortgag, bankruptci, chrysler, bailout, transact, taxpay, lend, auto, loan, tarp, investor, regul, foreclosur
Topic 49	class, sequest, deficit, balanc, revenu, trillion, reduct, wealthiest, wealthi, code, middl, entitl, compromis, loophol, millionair
Topic 50	minimum, wage, worker, manufactur, workforc, busi, infrastructur, invest, labor, small, innov, competit, bridg, broadband, hire

C.5 Intrapresident Variation in Agenda-Setting

Figure 4 in the main text shows substantial variation across presidential terms. Figure C1 shows λ overtime for each term by averaging λ within each month's briefings. For example, it appears that Bush's agenda-setting ability during his first term steadily increases during the period of unified government that began in 2003, relative to the White House's agenda-setting ability during a period of divided government earlier in his term. Likewise, it appears Obama's agenda-setting ability steadily declines during his first term during the period of divided government that began in 2011, relative to when the White

House enjoyed unified government earlier in his term.

Figure C1: Intrapresident Agenda Setting (λ) by Presidential Term

Note: Figure visualizes monthly averages of our agenda-setting measure (λ) by presidential term with a Generalized Additive Model (GAM) line to show the smoothed, nonlinear trend.

D Briefing Control, Additional Models

In Table D1, we add our suite of control variables to the models in Table 2, columns 3 and 4. As some of these controls are only available through 2020, this analysis extends only from mid-2010 through 2020. Even after incorporating our Prior-Night News Overlap measure (model 1) and an interaction between this measure and opening statement length (model 2), as well as our controls, the effect of opening statement length is similar in magnitude and statistically significant. Divided government is not statistically significant in this model, which we attribute to this truncated time series. The 2010-2020 period includes just six months of Obama’s first two years as well as Trump’s first two years in office (2017-2018), providing especially limited within-president variation from which to estimate the effect.

Table D1: Correlates of White House Briefing Control, Prior News Overlap with Controls

	(1)	(2)
Log Opening Statement Length	0.035*** (0.005)	0.035*** (0.005)
Special Guest(s)	0.088* (0.029)	0.088* (0.029)
Divided Government	0.002 (0.010)	0.002 (0.010)
Prior-Night News Overlap	0.175 (0.098)	0.134+ (0.057)
Opening Statement Length x Prior Share		0.025 (0.049)
Investigation	-0.001 (0.011)	-0.001 (0.011)
Presidential Approval	-0.001 (0.003)	-0.001 (0.003)
Election	0.019 (0.026)	0.019 (0.026)

E Broadcast News Leadership

E.1 Text Pre-processing for Overlap Measure

To assess whether the White House’s briefing agenda control influences network nightly news broadcasts, we leverage the GDELT Television News Ngram 2.0 Dataset, which provides n-gram counts for ABC World News, CBS Evening News, and NBC Nightly News. We focus on shingled trigram counts (i.e., three word segments) as they strike an appropriate balance between less-informative single word and two-word segments versus sparser four- and five-word segments. For example, the four-word phrase “The White House said” would result in two shingled trigrams: “the white house” and “white house said.” GDELT pre-processes their trigrams by resetting at punctuation. The resulting data is a network-day level matrix of trigram counts, thus containing the broadcast content each day for each network. GDELT occasionally provides trigrams from multiple same-network, same-day broadcasts. For these days, we keep all unique trigrams associated with a given network.

For the Daily Briefing, we use our SITS output to determine which briefing segments were introduced by which actor. That is, we assign all text spoken by either actor to the actor our model labeled as controlling that segment. We then pre-process this text by converting it to trigrams (i.e., three word phrases like “the White House”) and match it to the trigrams in the ABC, CBS, and NBC nightly newscast transcripts provided by the GDELT Television News Ngram 2.0 Dataset for those same-day broadcasts.

E.2 Overlapping Trigrams

White House and Network News Trigram Overlap

Obama (05/04/2011): bin laden was, osama bin laden, what was your, there is no, laden was killed, it was him, keep in mind, you saw them, that we are, the united states, killed osama bin, you see the, sure that very, very graphic photos, that osama bin, going to be, out this stuff, we discussed this, is going to, floating around as, shot in the, trot out this, head are not, you will not, so there is, that’s not who, did you see, stuff as trophies, this stuff as, graphic photos of, an incitement to, absolutely certain that, walking on this, dna sampling and, we killed osama, a propaganda tool, is important for, to spike the, in mind that, reaction when you, doubt that we, osama bin laden’s, done dna sampling, as a propaganda, somebody who was, why the president, that we have, this was him, out of the, laden is dead, he could be, are not floating, for us to, when you saw, we don’t need, and so there, your reaction when, don’t need to, it is important, was your reaction, i don’t think, who was shot, not who we, not to release, who we are, that the president, not floating around, will not see, incitement to additional, there will be, bin laden is, that we killed, that this was, on this earth, important for us, that very graphic, need to spike, this earth again, and i don’t, us to make, certain that this, was shot in, mind that we, in the past

Trump (10/19/2017): he knew what, what he was, he wanted to, me tell you, that was the, he was getting, let me tell, knew what he, was the message, tell you what, chief of staff, where he wanted, when he died, what do i, least that was, my first recommenda-

tion, to say to, not call my, and my son's, tried to express, took this job, and he said, the white house, it's nice to, that's what the, who was my, not a negative, was where he, he was doing, best men on, like to call, that president obama, i thought at, believe president obama, that he's a, the burden on, you that president, we're talking about, said to me, that a member, exactly where he, there's no reason, he was where, wanted to be, would have listened, what the possibilities, a fallen hero, reason to enlist, with when his, asked me about, just to simply, congress would have, president trump about, make that phone, at the white, i was on, to simply say, was my casualty, what the president, call my family, family members are, he was my, cases we're talking, was on active, not do it, call that parents, the phone call, no perfect way, tell you that, and i said, to four families, absolutely stuns me, have listened in, to the families, exactly what he, thought at least, when i was, because we're at, was getting into, can do to, a member of, be with when, phone call that, on active duty, in any event, say to four, message that was, do to lighten, at least that, what he wanted, stuns me that, to be with, you what my, me about previous, there's no perfect, knew what the, in his way, was just to, and when he, perfect way to, a negative thing, i took this, to do it, by the best, he's a brave, trump about how, the president earlier, because he was, nice to do, on these families, that's not a, exactly the people, me that a, said to him, that was just, in my opinion, about how to, nothing you can, he asked me, on that conversation, he not do, surrounded by the, not a criticism, i said to, the people he, by joining that, that phone call, he said to, was not a, burden on these, you what i, and i thought, and he was, this job and, with exactly the, the best men, we're at war, to president trump, it stuns me, you can do, when his life, wanted to do, four families the, the president tried, don't believe president, when he was, was he not, he was killed, that was not, not the phone, when i took, job and talked, a lot of, from the president, members are looking, with the president, no reason to, the message that, he said he, some of the, to see the, to tell you, if you have, and on that, and if you, for the first, to see you, we have to, one of them, give you a, was surrounded by, on this earth, my son's case, son's case in, the name of

Biden (08/17/2021): afghans who helped, helped the u.s., to the airport, to get out, tens of thousands, with the taliban, this was a, is he taking, who helped the, out of the, the white house, but is he, of afghan women, want to get, out of afghanistan, buck stops with, who are now, now that the, have informed us, the united states, the ground in, provide the safe, that they will, the state department, intend to hold, taliban have informed, be able to, what is he, are prepared to, the decision to, i want to, the kabul airport, take over and, the safe passage, not just the, he taking ownership, americans and afghans, stops with him, president biden had, the taliban have, it's going to, the buck stops, the taliban to, to get the, them to that, civilians to the, to complete the, and afghans who, to get into, on the ground, to hold them, decision to leave, that they are, at camp david, could take over, they are prepared, president biden is, the airport and, hold them to, just the decision, safe passage of, of thousands of, going to be, here in the, as he said, is that when, any bloodshed that, americans to get, as we move, assessments you're describing, with respect to, had to be, and so are, white house disregard, and president biden, that happened during, did the white, intelligence and push, also taking responsibility, happened during the, are going to, the fact that, happening right now, for every decision, bloodshed that may, change the

fact, go into the, into specific intelligence, are my colleagues, time for the, responsibility for the, be happening right, parties here responsible, don't want to, taking responsibility for, the same time, united states government, i am also, to do that, the past couple, and for any, other parties here, the rest of, also don't want, see what the, respect to afghanistan, every decision the, i also don't, i'm not actually, am also taking, but i also, fact that there, we'll wait for, and we'll wait, not actually familiar, the president and, a lot of, with george stephanopoulos, with the intelligence, couple of days, they're going to, that there are, for any bloodshed, at the same, states government took, that intelligence and, past couple of, so are my, more quickly than, to get that, he taking responsibility, he's taking responsibility, for the chaos, to stand up, chaos at the, 20 years of, stand up for, at some point, years of american, had to stand, it was time, people had to, tears in afghanistan, gave 20 years, war in afghanistan, was time for, we gave 20, the last few, what we are, the war in, hear from the, last few days, to hear from, over the past, the biden administration, i think we, there is no, they are moving

Press Corps and Network News Trigram Overlap

Obama (09/12/2012): the state department, we have a, the other hand, in the city, the united states, the film that, at the white, the city of, the white house, the president said, on the other, the libyan government, on the ground, with the libyan, do you think, that the statements, is you can't, seems to have, tendency to shoot, you make are, than what i, and as president, to have a, statement that came, make sure that, to say that, thought through the, shoot first and, one of the, think it was, first and aim, there's a broader, be learned here, a broader lesson, that it's important, are backed up, for you to, you think it, before you make, to shoot first, backed up by, sure that the, it's important for, ramifications before you, the statement that, broader lesson to, that the president, and that you've, i've learned is, distance itself from, learned is you, make are backed, things i've learned, romney seems to, was a statement, governor romney seems, important for you, around the world, in the first, and that is

Trump (02/20/2018): the white house, white house is, does the president, be able to, in las vegas, buy an ar-15, be an age, tougher on russia, starting from scratch, have any ideas, an age limit, to come up, he doesn't have, president have any, in the election, i can tell, tell you that, you that the, the president have, can tell you, but that's something, how to deal, to listen to, first bought an, for us to, that hasn't yet, to do about, fallen by the, as you know, i was trying, any ideas on, help from the, weapons and killing, that's part of, come up over, deranged individuals getting, the president hasn't, on the table, we're going to, for the idea, lives of 17, very clear that, you're taking my, and it certainly, clear that russia, laws in place, us to discuss, part of a, bought an ar-15, president hasn't said, is that something, those who buy, we expect further, individual took the, that's after a, supports not having, meddled in the, from scratch here, couple of weeks, hold of weapons, age limit for, what is he, have to be, was a teenager, there should be, some support for, or is he, i think that's, ideas at all, of the students, the idea of, the president offered, and that we, and the president, on the broader, after a deranged, of a lot, who buy an, the wake of, i know there, ideas of his, and he doesn't, it's very clear, that restrict that, not what i, of weapons and, stocks and that, of bump stocks, to before you, states that restrict, up

over the, have an impact, he has to, by the wayside, has to listen, but the president, use of bump, is he specifically, the students and, that russia didn't, action on that, florida was a, individual took dozens, about the fact, in the coming, words out of, you mentioned a, ideas on how, expect to come, teenager when he, trying to before, i think we, the fact that, president doesn't support, to address this, that he's been, took dozens of, something that's on, on how to, in the wake, from the trump, further action on, wasn't with help, lot of the, support for the, know there are, that we are, have fallen by, what i said, there are currently, any ideas at, president supports not, the president believe, but i can, the use of, dozens of lives, that's on the, could you explain, of 17 people, deranged individual took, want to make, fact that russia, 17 people at, going to do, bump stocks and, a lot of, over the next, a teenager when, the broader problem, the coming days, should be an, with help from, the shooter in, he specifically doing, broader problem of, if he has, my words out, russia didn't meddle, expect further action, was trying to, people at parkland, president wants to, think that's certainly, taking my words, that's not what, that has taken, the valuable work, he doing about, been tougher on, going through that, the russia investigation, said that the, implemented the sanctions, congress passed last, that jared is, addressed many times, work that jared, valuable work that, the sanctions which, as we've addressed, taken place will, you that nothing, we're going through, has every intention, a number of, does he not, i believe that, with a number, do his job, process that has, why hasn't the, hasn't the president, one of the, a little bit, that has to, a process that, doing it again, has taken place, and we're going, i can't answer, you have a, to do his, their access to, the end of, interfered with our, is he doing, the president has, has been tougher, of doing it, our election and, passed last year, place will affect, there's a process, doing about it, access to classified, he not need, we've addressed many, not need classified, with our election, able to do, the chief of, or not we, doesn't have any, have over the, terms of whether, on mental illness, that something that, which the president, in place in, yet been determined, in certain states, whether or not, banning bump stocks, hasn't yet been, the president is, to have fallen, doesn't support the, democrats and republicans, that would suggest, would suggest that, of whether or, that federal policy, the president wants, make that federal, of those accessories, president offered some, in terms of, use of those, suggest that he, place in certain, can't answer whether, will affect the, nothing that has, that nothing that, affect the valuable, information to do, jared is doing, a full clearance

Biden (01/20/2021): the fbi is, make sure that, needs to be, involved in the, the assault on, the president is, in the future, in the next, picking up the, part of the, when it comes, it comes to, this is a, for him or, the united states, you that i, thank you for, i just want, i told you, in his inaugural, but it was, white house and, about it until, the white house, president of the, two weeks ago, the new president, it was private, to the senate, all of us, has to be, you can see, it until i, we're going to, i talk to, and president biden, former president trump, talk about it, until i talk, and for the, and we will, the oval office, a sense of, and at the, all of you, to bring the, on the ground, less than a, a lot of, in the last, you have to, going to be, to move forward, across the country, is going to, need to be, in this country, world health organization, the federal government, but he is, president biden said, all the way, around the world, and you can, know that we, not be the, to show that, americans in the, he wants to, with each other, i want to, talked about the, of the steps,

the president has, getting to work, and center for, he talked about, you all know, there will be, his inaugural address, covid relief package, he going to, paris climate agreement, front and center, they're going to, one of the, is he going, it is an, on behalf of, focus in the, the american people, to ensure that, in the white, democrats and republicans, a little time, he was sworn, with the american, as well as, for all of, are in the, when it is, for the american, was a reflection, the course of, it is hard, even when it, is getting the, a reflection of, be quite involved, the role of, expect him to, team in place, is hard to, pandemic under control, on is getting, try to get, it was both, extensive parts of, of you play, return briefings with, the only one, over that time, your understanding on, next few days, day and the, we witnessed two, to deliver on, quickly those confirmations, briefings with our, in a dependable, of senior staff, the world on, also track progress, as we are, and ambassadorships to, do those regularly, to the cabinet, led to that, stranger to the, of congress from, the expectations of, to share with, the desire to, world on trips, early calls will, those relationships and, to bed every, that we announced, and i will, here of senior, for 36 years, to make that, to get through, he received a, be very involved, have more to, to read out, questions as possible, and in a, congress from both, days where we, you in the, power of truth, is president biden, will he be, in the coming, back to government, members of congress, for the president, choosing to any, will be with, a common goal, him when he, assistance for the, will president biden, the state department, will be on, to release the, that i would, lot of comments, who are desperate, to preview for, getting our national, the opportunity to, house and at, and when should, i should say, number of ways, would say he, and having more, that with the, delivering the best, the next few, get his cabinet, saturdays and sundays, setting an example, what is your, out for you, read out for, to do is, of this podium, letter in the, on the federal, to address the, to get to, of a pending, our democracy and, and the course, he goes to, want to do, indication of a, and i was, of setting an, with our health, quickly in the, preview for you, during the course, we are eager, ambassadorships to be, the challenges and, on getting the, has assistance for, this role as, can also track, it is not, to respond at, from president trump, of our choosing, to discuss on, sworn in today, importance of setting, respect for the, of ways to, and i expect, share that with, agenda moving forward, his decision on, that i come, home who are, in the oval, the power of, was both generous, he served with, when he was, respond at a, going to discuss, not planning to, the public so, to this podium, disagree for extensive, people on behalf, right to respond, with the public, be days where, topic he discussed, getting on the, there are a, you expect him, discuss the important, like to move, how quickly those, more to share, i will note, relationship with canada, short time ago, at home who, hope to have, work for the, get to those, his objective and, have a question, we all are, security team in, on friday with, we reserve the, whole team here, he would say, both in the, the coming days, on trips to, do is not, american people to, to share the, a dependable way, party today during, information to the, to do those, i know some, funding for vaccine, that he wakes, on the capitol, an indication of, issue he goes, accurate information with, biden planning to, with all of, of the members, for you or, deliver on in, you gave me, not talk about, desire to get, today during the, do you see, so i don't, is not just, the members on, these daily briefings, i noted earlier, we want to, sides of the, i would expect, weeks ago today, oval office right, on in this, his first call, issue that he, that was a, the paris climate, team here of, letter from president, getting the pandemic, coming out here, transparency

and truth, what we plan, meeting the expectations, people at home, and public health, goes to bed, calls will be, at a time, and with the, say he works, american people and, power of this, at this point, call will be, many of the, you and with, role of a, there for 36, ways to combat, let me ask, the issue he, as you noted, of delivering the, to his inauguration, president were standing, expect additional nominations, he discussed with, free and independent, getting onto their, i also work, plan to do, both generous and, was sworn in, deep respect for, to sit down, we'll have more, podium having served, members on both, when will president, for you at, and that's something, a short time, the day and, been discussing that, he be in, a topic he, when should we, leaders to sit, is your understanding, address the challenges, our team is, her way to, be picking up, ago today on, with him when, coming days and, to bring transparency, as his decision, i don't have, planning to release, but we have, center for the, that we can, bring transparency and, to the american, if the president, before he was, was reading the, gave me the, we'll try to, rebuild those relationships, partners and allies, also work for, as we all, people to make, and independent press, interests of the, him not planning, to get his, information with the, is front and, facing in the, manner of our, you at this, quite involved in, president biden's view, provide us the, he served there, do you expect, be on friday, we plan to, prime minister trudeau, for extensive parts, his early calls, the president were, be in that, said it was, our choosing to, making on getting, we have a, of engagement and, decision on the, today on the, this podium having, monday through friday, president biden planning, served there for, not fully done, pipeline that we, for the role, anything to read, which is sharing, and even when, on her way, in this role, officials and public, he was reading, covid relief measures, he wakes up, the issue that, i have a, of the american, the country together, he's going to, than a day, talk about the, you talk about, the deal in, is to move, can convey on, was designed with, put in place, and a sense, parties of what, spent eight years, for getting the, to announce his, that he believes, i spent a, rejoining the paris, pick up where, as we continue, this would be, a little technical, models to the, little time with, you in terms, getting this covid, was his reaction, nancy pelosi and, our health experts, of the process, want to know, appropriate in order, impacting red states, any wiggle room, president biden have, had an incredible, the relief they, to meet the, what are you, president biden plan, work with members, have that commitment, said he felt, to do that, oil and gas, a call or, gave a primetime, be with partners, terms of a, any tools off, in here to, been president of, relief they needed, submitted that to, red states and, you just mentioned, republicans take a, unity and bringing, details as well, you or advance, just skipped over, resolve of the, covid and what's, inaugural address and, american people can, people the relief, the vice president, noted a little, sense of some, and has he, together is to, and there is, get them in, were necessary to, want to pick, iran must resume, with regards to, and chuck schumer, conversations with foreign, of some joy, he had an, he was coming, see a need, get it done, laid out as, spent the day, we need to, change being one, are the next, was asking questions, importance of unity, been in office, it was designed, designed with the, can do their, of both parties, president has asked, states and blue, a vital part, a day now, has asked us, an incredible sense, has an impact, his view is, that means getting, or level of, address and the, place as of, country together is, negotiations with mitch, presidency to be, give you all, would expect his, and get going, roll up his, a primetime address, as of today, give us some, helping to get, about how to, that you did, means getting this, is

too high, the people they, in terms of, in place as, speak with the, preparations for getting, reviewed by our, how long are, does president biden, to pick up, long are you, as you know, with members of, has not been, he believes that, we are confident, view is that, vital part of, as the vice, to conduct the, his presidency to, that were necessary, that the way, get through this, and that's vitally, i can convey, is some debate, that to the, in the world, relief package through, has the legal, for you in, that you took, his focus is, was the emotion, and republicans take, does the administration, of his presidency, president has made, that you just, the brazilian president, take it now, what it was, with the number, by our team, a couple times, president biden promised, students or level, eager to get, don't have anything, predict for you, partner to president, going to leave, is a discussion, the administration still, states was one, and it will, continue to do, that commitment today, pelosi and chuck, the leases will, conversations with each, of how congress, to president obama, the climate crisis, like for him, to leave the, whether he has, not had a, suffering of the, us some color, is there any, for their relationship, under the deal, what will be, to roll up, asking questions about, only countries in, some debate about, about what it, is not on, keeps us safe, the beginning of, has not had, of deep cleaning, and the leases, biden promised to, incredible sense of, biden plan to, we are only, table in the, there is some, does he think, i noted a, we are in, specifics of how, had a seat, the way to, impeachment to them, level of testing, not on politics, i will just, states continues to, and covid and, the table in, was a vital, out as his, an important role, order for that, all of our, playing an important, from our health, continuing to conduct, about unity in, clear that he, being one of, always has an, he think that, he felt like, a vital step, president biden wants, desire to roll, to the people, wants a theme, proposal is too, share from our, there any wiggle, parties to get, is a conversation, climate change being, spent a little, bring the country, agreement is a, both parties of, is that the, united states was, he has the, his desire to, beginning of the, what are the, he plan to, the world's largest, of the world's, how to move, what is the, so that means, as i noted, asked us to, it was like, to work with, that always has, in order to, announce his specifics, people they represent, he was asking, about the measures, just like the, on president trump's, the price tag, he spent eight, to know all, reported that you, he also said, leaders will be, white house ready, to share from, deal in order, he spent the, also said he, question about it, a final package, preference is to, be reviewed by, it as an, was one of, know all the, unity in his, ready and safe, to get it, to the u.n., the day with, as an example, was like for, to speak with, plan to speak, of the united, price tag on, here as the, be one of, order to meet, i just skipped, comes to iran, it was laid, and safe for, of what will, since you gave, important role as, going to cut, sleeves and get, he been president, process for us, is a vital, members of both, the last few, what was his, president's proposal is, to predict for, room on that, plan to work, convey on climate, going to continue, here at home, them in here, that keeps us, was laid out, of unity and, biden have any, focus is not, trillion as a, is the expectation, was coming home, of a call, that was the, no question about, wiggle room on, united states continues, 30 days for, in order for, business of the, his family and, as a starting, for less than, at the beginning, if president biden, off on that, countries in the, tag on the, house ready and, role as a, what i can, get to work, biden wants a, his first term, as he noted, first foreign trip, it is on, congratulations on your, on the campaign, two big concerns, big concerns for, solving the problems, is on getting, term to speak, noted on the, to work and, on

your new, concerns for pro-life, don't have any, on getting to, problems of the, only seven hours, foreign trip yet, about his political, political plans moving, first term to, his political plans, the problems of, he noted on, to speak more, will not be, so i also, even when it's, his first foreign, is to bring, president biden is, just about the, he works for, but his objective, with me today, truth back to, here with me, works for the, role as well, and then the, i work for, share the truth, standing here with, hard to hear, i hope to, work for him, to make sure, of when he, going to take, forward with a, is a great, so what are, at this time

E.3 Downstream Influence, Additional Models

In Table E1, we conduct a robustness test in which we iteratively remove trigrams used in network news in days $d - 3$, $d - 2$, and $d - 1$ from the briefing transcripts in day d before constructing our similarity measure. This ensures that neither actor is “credited” with downstream influence on an ongoing news story that appeared on the previous three nights’ nightly news coverage. We also remove stop words including letters and stop words from the `tm` package, and a very small set of additional words: abc, cbs, nbc, senior administration official, senior administration officials, nbc nightly news, abc world news, and cbs evening news. We do so to ensure the relationship is not driven by the presence of frequently used, but unmeaningful words. Our results are substantively similar to those in Table 5.

In Table E2, we re-run the models from 5 excluding days where opening statement length exceeds the upper 75th and upper 50th percentile. The results are substantively similar, indicating that the White House’s influence on downstream news coverage is not driven by long opening statements that mechanically inflate their influence.

Table E1: Relationship between Agenda Control and Broadcast News Coverage

Note: Results come from ordinary least squares models. The dependent variable is the standardized day-level difference between the White House–broadcast news Jaccard similarity and press corps–broadcast news Jaccard similarity with the previous three day’s news trigrams removed (higher values are associated with more White House influence).
